Vol. 20 No. 21 | Lancaster Farming, Saturday, April 5, 1975 | $3.00 Per Year

House Ag Comm. Has Conservation Hearing

by Dick Wanner

The Pennsylvania House Agriculture Committee held an all-day hearing on Tuesday to assess the impact on farmers of environmental regulations. Specifically, representative Kent Shelhamer's committee was looking at the Pennsylvania Department of Environmental Resources mandate that all Commonwealth farms have implemented conservation plans by July 1, 1977.

An earlier meeting on the same subject had been held in late February, and when he ended Monday's hearing, Shelhamer said there might be another on later.

Both of the state's dominant farm groups - the Pennsylvania State Grange and the Pennsylvania Farmers' Association - were on hand to comment on the DER regulations.

Charles Wismer, chairman of ;the Grange's state legislative committee, told the hearing that his organization is in accord with the purposes and intent of the Clean Streams Law, but that they're worried about the effect of DER restrictions on agriculture.

Wismer has three major recommendations to make to the committee members. The first was that any plan or project carried out under the law should not reduce or interfere with food production. Second, that livestock kept for meat or milk production should have free access to any water flowing through or adjacent to pasture land. And third, Wismer said, all society should share the costs involved in carrying out any erosion control measures farmers would be required to install by law.

In concluding his testimony, Wismer said, "We need some form of reasonable guidelines to determine the degree of control that may be acceptable. But the rules and regulations now stand, the subject is open to individual opinion and judgement. Let's have a sensible and workable plan that doesn't interfere with food production."

Chester Heim, public affairs director for the Pennsylvania Farmers'

[Continued on Page 19]

Although he was surrounded on all sides by bankers, Noah Wenger, a Stevens R1 poultry and beef farmer, was still able to smile. Wenger's farm was one of the stops made Wednesday by some 130 farm loan officers attending the 10th annual ag banking conference sponsored every year by the Pennsylvania Bankers Association. This year's meeting was held near Lancaster.

Pa. Ag Bankers Confer On Farm Loan Outlook

Agricultural lenders from all over Pennsylvania converged on Lancaster's Sheraton-Conestoga Motor Inn on Wednesday and Thursday of this week. In all, 135 bankers turned out for the 10th Annual Agricultural Lending Conference which is sponsored each year by the Pennsylvania Bankers Association.

During their two-day stay, the bankers heard from a number of Penn State's ag economists, toured two nearby farms and listened to a presentation on the national farm picture by Derl I. Derr, director of the American Bankers Association ag division.

The conference began Wednesday morning with a look ahead for farm commodities, the international situation, and the management needs of farmers.

Dr. John Malone, head of agricultural economics at Penn State, told the bankers that farm products from the nation and the state are going to become an important part of world trade negotiations. He added that Pennsylvanians should become increasingly interested in the world food problem and its solution. The state currently ranks 24th in overall food production in the U.S., and is one of the top 10 dairy states. Some nine percent of Pennsylvania's labor force is involved in agriculture and agricultural products, Malone noted.

Two of the most heavily stressed topics during the meeting were farm estate planning and cash flow for farmers. Frederick A. Hughes, professor of farm management extension at Penn State, told the group on Wednesday that farmers' estates are growing very rapidly. "In the last 10 years," Hughes said, "farm real estate values in Pennsylvania have grown an average of 200 percent, a figure which doesn't even come close to the actual

Mung Beans - Your Newest Cash Crop?

by Dick Wanner

Moses Chu feels that well, will produce five pounds of crisp, white sprouts, an inch-and-a-half long in about five days.

Most of the mung beans imported into this country come to the port cities of Los Angeles, San Francisco and New York, where the Chinese communities are the largest. Chu doesn't have any definite figures on exactly how many are - imported, but said that his sources in New York tell him several hundred tons annually enter that city alone.

Chu said that he will buy mung beans from area growers who are willing to experiment with the new - crop. He said that at the time the sale is consummated, he will pay the grower exactly

[Continued on Page 22]

Moses Chu feels that farmers here can make money growing mung beans. And he's backing up that belief with his time and money. Chu feels he can sell mung beans at a profit to East Coast ethnic groups - such as the Chinese community in New York City. This is the bean most widely used for sprouting, and it is a staple of Oriental cooking.

Most of the mung beans consumed in this country are imported from Peru. Some are grown in California, and some are grown in Oklahoma. "But the Peruvian beans are the best," Chu told Lancaster Farming last week, "because they have a high germination rate and they produce a nice firm, white sprout. The beans from Oklahoma look nice, but they don't sprout well. I think because they're dried with heat."

Bean sprouts are an excellent source of cheap protein. Chu thinks he can give his customers an even better buy by saving them the freight costs on Peruvian beans. A laboratory analysis of the nutritional value of mung beans is indeed impressive. The protein content is a whopping 24 percent. There's very little oil, about 1.5 grams in 100 grams of uncooked beans, and about 60 grams of carbohydrates per hundred pounds of beans. Each 100 grams of mung beans provides 340 calories. The bean itself has a thick, dark green skin, and it's about one-fourth the size of a normal soybean.

Sprouts are made from the raw beans by carefully controlling temperature and humidity. One pound of beans, if everything goes

Showing Horses Is Her Hobby

Spring with its warmer weather offers the opportunity for more outdoor activities and for Natalie Immel, that means one thing - horse show competitions.

Natalie, a Manheim Township senior, learned to ride as a youngster and has been competing in horse shows for about as long.

A skilled rider in both Western and English phases of contests, Natalie has ridden not only in local shows including contests at the Lancaster Riding Club and at Quentin but also in National competition including the Quarter Horse Congress in Columbus, Ohio.

A well-rounded competitor, Natalie participates in almost any type of contest including showmanship, halter classes, equitation and western riding.

Much of Natalie's work and riding has been combined with her work as a Lancaster County 4-Her. A member of the Broken Bit 4-H Club for eight years, Natalie has served the organization as secretary, vice president and was recently selected to her second term as president.

Natalie has been active in many 4-H activities in the county including participating in a horse club exchange to Michigan and

Natalie Immel, Lititz R3, displays some of the many trophies, ribbons and plaques she has won during horse show competitions.

Wenger Is Appointed Pa. ASCS Chairman

Noah W. Wenger, a Lancaster County farmer from Stevens, has been appointed chairman of the Pennsylvania State Agricultural Stabilization and Conservation (ASC) Committee, it was announced in Washington this week by U.S. Secretary of Agriculture Earl Butz.

State headquarters for the Pennsylvania Agricultural Stabilization and Conservation Service (ASCS) are at Harrisburg.

Wenger, 40, operates a 107-

Local Grain

Thursday, April 3

These prices are made up of the average prices quoted by a number of participating local feed and grain concerns. It should be noted, however, that not every dealer or broker handles each commodity. All prices are per bushel except ear corn which is per ton.

The average local grain prices quoted Thursday, April 3, 1975 are as follows:

	Bid+	Offered+
Ear Corn	64.00	70.33
Shelled Corn	2.98	3.16
Oats		
Local	1.80	2.01
Western	——	2.19
Barley	2.23	2.47
Wheat		
Millers	3.40	——
Feed	1.92	2.15

+Bid is the price the dealer will buy from the farmer delivered to the mill. Offered is the price the dealer will sell for at his mill.

New York Dressed Meats

April 3, 1975

Daily distributive - less than carlot meat trade. Compared with Wednesday: Prices weak for all fresh meats and quotations mostly unchanged throughout the list. Lamb demand fair early but centering on carcasses and cuts other than chucks and these accumulated in spots and several lots transferred to freezer accounts. Pork butts very slow this session.

Buy Certified Seeds

Good crops begin with good seed and these days good seed sometimes can be a hard thing to get. Maryland farmers who want good crops of soybeans, corn, oats, rye, wheat, and barley can assure themselves to top quality seed by making sure they purchase and use "Maryland Certified Seed."

"Today's high seed prices, scarcity and heavy planting demands mean that farmers should use certified seed more than ever," says M. H. (Gus) Day Chief of the Maryland Department of Agriculture's Turf and Seed Section which administers the Certified Seed Program in cooperation with the Agronomy Department of the University of Maryland.

"Research and field tests have proven these varieties to be superior. Certification assures the user that the seed he purchases was grown from planting stocks of known pedigrees," Day says.

"Under the Certification Program we check to make sure the seed production fields have been closely inspected and that the seed has been properly handled during harvesting, cleaning and that the seed harvested meets the highest standards for purity and germination.

"The payoff comes because clean and strong seed means quicker growth and less trouble with weeds. The growth is more uniform and dependable and this reduces the chance of crop failure or low yields. The net result is that these factors combine to give high yields of better quality crops," Day said.

Seed buyers can identify seed grown under the Maryland Certified seed Program by the blue, numbered tag on the bag.

Day points out that "Seed production is a specialty. Good seed growers are specialists who must be willing and capable to devote time, care and effort to producing a better product using the latest tools of modern plant science. Using their skills, farmers can have specialists working for them at planting time.

"Quality seed combined with good agronomic practices such as soil testing, careful ground preparation, liming, balanced fertilizer programs and careful attention to weed and insect control mean good crops and top dollar at harvest time.

"But, it is important to remember that while poor crops can be produced from good seed stock, good crops never come from poor seed," Day adds.

THE OLD FARMER'S ALMANAC

APRIL 7-13, 1975

Ah, the violet's perfume!

Remove snow covers from your shrubs . . F.D.R. died April 12, 1945 . . . New moon April 11 . . . Income taxes due on the 15th . . . Average length of days for the week, 13 hours, 7 minutes . Ireland without food this week in 1847 . . . General MacArthur sacked by H.S.T., April 11, 1951 . . . Peepers are peeping now . . . Fear knocked at the door, Faith answered and nobody was there.

Ask the Old Farmer: I can remember when the young girls were known as "flappers," but I never knew what it meant. Do you? F. S., Decator, Ga.

The word was sort of imported from England. A flapper, as the English call it, is a young duck, too young to fly, but which will flap its wings wildly in the attempt when startled or enthused about anything. Rather apt, we would say.

Home Hints Next time you braise shoulder lamb chops, add some strips of carrot and onion to the braising liquid. You'll like the flavor

OLD FARMER'S WEATHER FORECASTS

New England: Stormy most of week with rain in south, sleet and snow in central and 10-12' snow in north; sunny and colder by weekend.

Greater New York-New Jersey: Light rain mixed with snow and cold to start, then clearing and warmer; scattered showers possibly mixed with snow latter part.

Middle Atlantic Coastal: Quite heavy rain in east at first, then clearing and cool; late week thundershowers in west but clear and cool in east.

Southeast Coastal-Piedmont: Heavy rain to start in north and very warm, then clear in south; end of week clear and cool in north and cloudy with showers elsewhere.

Florida: Week begins partly clear and hot, then showers; rain in south latter part, then clearing and very warm by weekend.

Upstate & Western N.Y.-Toronto & Montreal: Snow to start, then turning clear and unseasonably cold; end of week clear and cold in west and light snow in east.

Greater Ohio Valley: Rain and freezing rain at first, then clear and cold; clouding up latter part with thunderstorms by weekend.

Deep South: Early week cold and rainy; showers continuing latter part but warmer.

Chicago & Southern Great Lakes: Week begins clear and cold, then considerable snowfall; end of week partly sunny and very cold.

Northern Great Plains-Great Lakes: Partly sunny and cold to start, then considerable snowfall in south and east; end of week cold and cloudy with occasional flurries.

Central Great Plains: Light snow in north at first, then scattered showers east and south and seasonable; partly cloudy and cold latter part.

Texas-Oklahoma: Early week cold snap in north and central with some showers in south; showers at week's end everywhere except in north.

Rocky Mountain Region: Week begins snowy in central and south, then showers or flurries in north; some late week rain in central and north but clear and seasonably cool in south.

Southwest Desert: First part of week pleasant and clear; end of week partly cloudy and warmer.

Pacific Northwest: Sunny and mild to start, then rain; end of week cool with moderately heavy rain.

California: Rain at first, then cloudy and cool in north and clear in south; end of week cloudy, cool in north and warm in south.

Lancaster Art Students Exhibit at General Hospital

Students of Lancaster art instructor Camille H. DeHaven will exhibit their works throughout April at the Lancaster General Hospital, in the admissions waiting area and in the central corridors of the Hospital's first five floors. The art exhibit is sponsored by the United Auxiliaries to the Hospital, with all paintings for sale as a fund-raising effort.

Most of the display will be comprised of oil paintings, with subject matter ranging from landscapes to floral studies to still life. Exhibiting from the adult class will be Ruth Weidman, Millie Hollinger, Marion Boltz, Mountville; Barbara Krusen, Paradise; Ann Ackerman, Leola; Virginia Moorhouse, Irene Kohr, Alma O'Donnel, Sharon Leaman, Ann Stehman, Joyce Ingram, Lynn Burton, Kay Hawk, Gwen Callas, Rose Epestein, Judy Manente, Lancaster; Gladys Barley, Mary Jane Henger, Millersville.

The junior class will be presented by Diane Leaman, Carol Jones, Carol Brenna, Kim Price, Sally Hager, Abby Dochat, Rick Frane, Mary Rose Fry, Kevin Williams, Bart Buckwalter, Craig Puffer, Lancaster; Debby Brinton, East Petersburg; Nancy Weaver, Columbia R1; Maureen Marks, Landisville

Children's class members with works on display will be Pam Binkley, Lisa Procopio, Daniel Douple, Mark Keating, Rickie Bergan, Trudy Flemming, Ann Louise Hoover, Susan Bellamy, Lancaster.

Mrs. DeHaven's talents as an instructor were developed through studies at the Fireside Art Studio, Chicago, and through working with artists Donald Klopp, Charles X. Carlson, Clarence Dreisbach and Floyd Hackman.

HELPING PEOPLE . . . *That's the FARMERS FIRST way.*

House Cleaning Products Are Poisonous — Beware

Bleaches, paints, furniture polishes, cleansers and disinfectants can and will kill if misused. They are all substances which may be used year 'round, but really come out of hiding during an annual event that takes place in almost every household - Spring Cleaning.

Protect yourself from accidental poisoning with these substances. Be sure containers are well-labeled as to the contents of each. "Fumes from paints, solvents and aerosol products can overcome, suffocate and poison the user by getting into the lungs," reports Jack Ogun, Chief of the Drug, Device and Cosmetic Compliance Section, Bureau of Comprehensive Health Services, Pennsylvania Department of Health. Be sure there is a lot of ventilation in rooms in which they are being used.

Accidental poisoning is one of the greatest causes of medical emergencies involving children, endangering more than two million every year.

Protect small children from dangerous substances by keeping the products securely locked in cabinets high enough to be out of easy reach. Inexpensive small safety locks are available and should be installed on all cabinets that contain potentially poisonous products.

Keep children out of rooms in which products with strong fumes are being used. "If the fumes both a person of adult size, they will affect a little person all the more so," Mr Ogun said.

Use caution when disposing of all drugs or harmful substances. Children will think the containers are good playthings if they see them When buying additional supplies, make sure they have safety closures, even if it takes you a little more time to get the container open.

Mr. Ogun, in urging everyone to learn as much as they can about poison prevention, said that physicians, nurses, pharmacists and the public libraries are good sources of information on poison prevention.

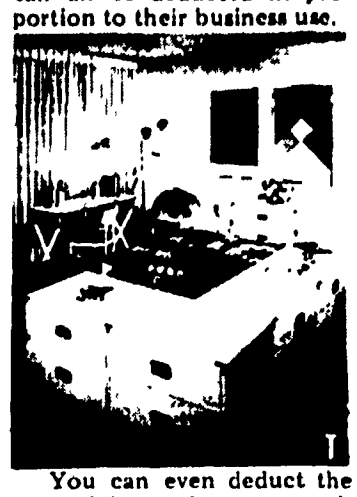
In cases of suspected poisoning of any kind, contact your physician or the nearest poison treatment center, usually located in the local community hospital. The Poison Control Center number to call in Lancaster County is 299-4546.

xxx

When you try to make an impression, that is the impression you make.

Home Office Hints

Be it ever so humble, a home office can mean significant savings at tax time. Items such as rent, electricity, taxes and interest on a mortgage can all be deducted in proportion to their business use.



You can even deduct the cost of decorating your work area, according to Kemp Furniture Industries. Handsome, well-designed chests, wall units and desks are legitimate business expenses--provided, of course, that you purchase them exclusively for business purposes.

Your home office can be part of a room, one entire room, or several rooms; the IRS isn't fussy as long as the space is devoted to business

Let's say you set aside one room entirely for professional purposes If your work room represents six percent of your home's total area, you can deduct six percent of the year's costs for heat, light, insurance, and so on.

But if you use the same room only two hours a day for business, it's available for family use during the other 22 hours of the day. In that case, after figuring 6 percent of the year's expenses, you'd multiply that sum by the fraction 2/24 to determine your actual deduction.

Is a home office worth the extra figuring and record-keeping? Definitely! Even if you love your work, you don't want it to become too taxing.

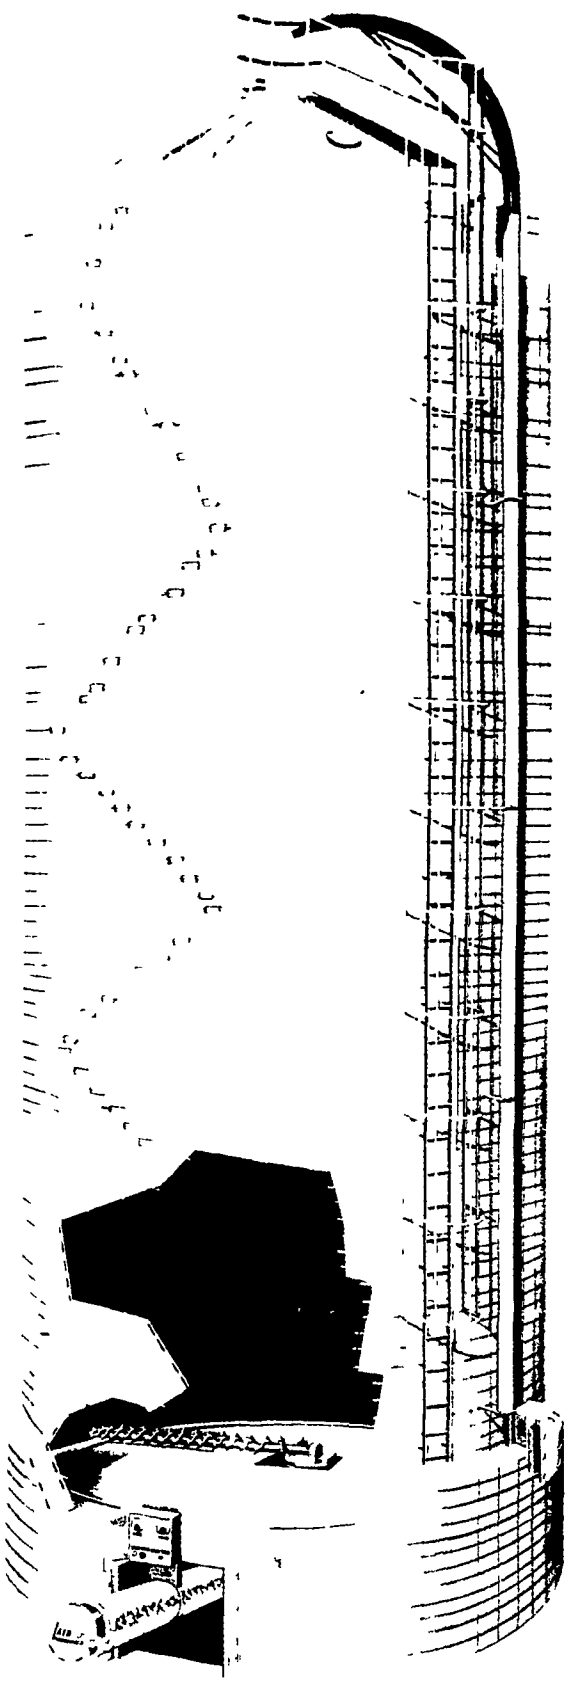
AGWAY

Add NEW DIMENSIONS to feed processing on YOUR FARM with the

NUTRI-MATIC® SYSTEM



"Atmosphere-controlled" and "bottom unloading" are not new terms in today's, modern animal agriculture. What is new are the new dimensions in feed processing available with the Madison Nutri-Matic System. Here are just a few:

New Dimension: Light gray, Madison Vibra-Cor® Stave concrete construction and white, reinforced fiberglass roof make possible reasonable control of pressure inside the structure caused by inside temperature changes. This new dimension eliminates bothersome, easily damaged, expensive breather bags . . . increases the Nutri-Matic System's usable capacity, too!

New Dimension: Superior performance in bottom unloading! The Nutri-Matic's Laidig Bottom Unloader, built by another Chromalloy American Company, combines durability with exceptional ease of access to the unloader for maintenance.

New Dimension: Competitive first costs! For example, a 24 x 75 Nutri-Matic System usually is more than several thousands of dollars *less* than bottom unloading steel structures of comparable capacity. Nutri-Matic dimensions are usable capacity, not just nominal dimensions. Nutri-Matic Systems are quoted *complete* — structure, unloader, accessories, freight and turn-key erection by factory branch crews. No additional labor is charged to you or required by you.

New Dimension: Logical capital investment! You harvest and process haylage and high moisture grain in your Nutri-Matic System, while you store whole plant corn silage (the most easily preserved and safest to store of the forage crops you raise) in a Super Harvest King or other model Madison Silo. Make alternative investments with your *savings* in corn silage storage . . . more cows or an automated feed lot. One Madison Dealer near you serves both your needs . . . Nutri-Matic Systems and Madison Silos.

Farm Commentary

by Dick Wanner

Must Conservation Be An All Or Nothing Proposition?

Conservation took a beating this week in Harrisburg at a hearing conducted by Rep Kent Shelhamer's House Agriculture Committee Shelhamer and his colleagues, and most of the witnesses appearing before the committee, drove home the point time and again that conservation was expensive, and the farmer just can't afford to conserve his soil.

Keith Eckle, a Lackawanna County dairyman and vegetable grower, told the committee that he believes conservation pays, but only to a degree. He asked the committee why farmers were still able to grow crops after many years of what the soil scientists said were drastic soil losses. He said farmers in Northwestern Pennsylvania were strongly opposed to the July 1, 1977, deadline set by the Pennsylvania Department of Environmental Resources for the implementation of conservation plans on Commonwealth farms

Eckle told the committee that he didn't like the DER deadline, and he also didn't like the way some DER employees were approaching farmer resistance to the deadline "We had one DER person come to a meeting in Lackawanna County," Eckle told the hearing, "who said he'd strap a gun on if he had to enforce the regulations I certainly don't think that's a good way to deal with the problem"

We have to agree with Eckle about the gun Any employee of DER or any other regulatory agency who'd make a statement like that should be at least reprimanded and probably dismissed.

But we cannot endorse any movement which would have us believe that there is no need for soil conservation.

Perhaps farmer resistance is rooted in the origin of the conservation regulations. Nobody wants DER to come to his farm, tell him he's not doing a good job and threaten him with jail Nobody wants to be told that he's responsible for spoiling Pennsylvania streams, or that he's a poor steward of the soil Nobody wants to be shamed or forced into complying with the sedimentation regulations of the state's Clean Streams Law

It seems to us that people are setting up battle lines. You're either for conservation or against it And if there's any strength in numbers, the people who are against conservation regulations are not only going to win the battles but the war

We hesitate to join either camp Farmers are an independent lot, they're beset by economic problems and they are no doubt doing a much better job of conservation than many would have us believe

But there's also no question that soil is washing away from Pennsylvania farms Some soil loss is unavoidable Others is tragically wasteful. Even in Southeastern Pennsylvania, in the garden spot of the world, one does not have to drive very far to see corn fields plowed and planted in straight rows running up and down steep slopes

Topsoil from carelessly tilled fields finds its way into the streams of Pennsylvania. Too much sediment can choke the life from a stream, killing fish and aquatic plants But a dirty stream isn't the real tragedy of soil erosion

The real tragedy is the loss of topsoil If topsoil washes away faster than it builds up, we'll sooner or later find ourselves with a shortage of what is by far our most important resource

We feel that there has to be some way for conservationists and farmers to get together Many farmers are already dedicated conservationists, but too many, it seems, feel as though they are in danger of being coerced into meeting unreasonable standards

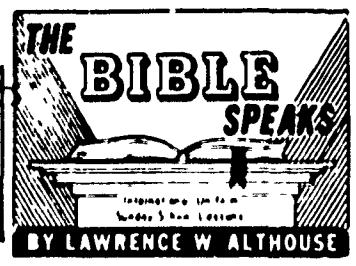
No farmer wants to lose all his topsoil And no farmer wants to spend thousands of dollars to protect land that he feels is being adequately cared for SCS people are quick to point out that cropping practices, rotations and contour strips can also reduce erosion, but most farmers are under the impression that they'll be required to build terraces to comply with DER regulations And they say they can't afford terraces

It is no doubt theoretically possible to stop all erosion But this would be an excessive burden to place on farmers If we have to have laws and regulations governing soil loss, then those rules, we feel, should be aimed at stopping only the soil loss which exceeds the amount that's built up every year by normal farming practices

Certainly, with this minimum erosion standard, a lot of sediment will still wash into Pennsylvania streams But if all farmers were to meet this requirement the silt load would definitely be reduced. And if developers and road builders could be compelled to meet zero erosion standards, then, conservationists tell us, we'd automatically solve 50-percent of our sedimentation problem

Farmers should be willing and able to meet minimum - rather than absolute - erosion standards. And most farmers want to keep the topsoil on their fields, whether those fields are owned or rented We feel government policy should be aimed at encouraging farmers to meet minimum erosion standards and helping them when they need help And in cases of extreme neglect, farmers should be just as liable for prosecution as careless roadbuilders and developers.

Conservation practices can be an invaluable management tool in the operation of a successful farm. But conservation laws that are too stringent can put farmers out of business



ON SEEING STARS

Lesson for April 6, 1975

Background Scripture: Psalms 104.
Devotional Reading: Psalms 95:1-7.

Some evenings ago, frustrated with seemingly endless and insoluble problems, I decided to take a walk in order to "clear out the cobwebs." As I walked along in the inky darkness, I happened to glance upwards and was surprised to find the dark sky punctured with millions of bright, shining lights. Like a gawking tourist who was seeing them for the first time, I stood and stared upward for a long time.

Suddenly I was aware that the "cobwebs" were gone. The light of those myriad stars had cleared my vision. For a while I was absorbed into something that utterly dwarfed my problems: a picture window into God's great universe!

"Thou art very great!"

When was the last time you stood and looked into the sky on a beautiful starry night? Can you remember in your mind's eye the thousands of twinkling lights? Few of us can look into such a sky without a deep sense of awe and reverence overcoming us.

It had been a long time since I had looked into the heavens on such a night. This is a statement I make with regret since it is only a matter of a few days since I had seen a cruel face, a littered lawn, a dingy street. I am not suggesting that we should not look at these things - we can hardly help it - but that if we only see these things and miss the starry skies, the red sunsets, and the wild flowers of the field, we are missing something vital.

The ancient man lived closer to these things than most of us do today. He tended flocks on the hills of Judea and had the whole evening to contemplate the heavens. He walked along winding roads and had time to see the wayside flowers and stop beside the quiet pools and springs.

Not us . . . we whizz along the highways, seeing little but the ever present billboards and discarded refuse. We drive to school, to work, to play and there is no time for wayside flowers and quiet streams.

"I will sing praise"

A number of years ago I led a group of high school youths on a bicycle trip over some terrain that I thought was quite familiar to me. Many times I had driven over the roads of this area. Yet, how different it seemed by bicycle! How differently things looked! There were so many things I had never even noticed before.

Perhaps this is why we miss so much that is around us: we don't take time to really see what is there. Yet, when we do, we find God speaking to us through what he has created. Suddenly we are confronted with something bigger than ourselves and our own problems and concerns.

Obviously, it was an experience such as this that led the psalmist to declare:

Bless the Lord, O my soul!
O Lord my God, thou art very great!

(Psalms 104:1)

When life closes in around us and we have forgotten the Source of our being, it is then that we must once again lift up our eyes and see the stars and turn once more to the Creator who made us and sustains us.

(Based on outlines copyrighted by the Division of Christian Education, National Council of the Churches of Christ in the U.S.A. Released by Community Press Service.)

NOW IS THE TIME . . .

County Agr. Agent
Telephone 394-6851

To Prepare Soil Conservation Plan

Considerable publicity is being given to the Pennsylvania Clean Stream Law requiring land owners to develop a soil conservation plan by July 1, 1977. There are rumors of this deadline being extended, but we do not have any definite information on this fact at this time. The important thing is that land owners should be interested in controlling both water and soil erosion from their land. This is good soil husbandry at any time. The law does not state any particular person or agency to prepare this plan. It may be done by individual farmers, or some of the agencies interested in soil and water conservation. It does not have to be done by the Soil Conservation Service or the District, even though these two agencies have assumed the responsibility of developing conservation plans when the land owner signs the request for this assistance. Farmers are urged to be alert for future developments.

To Evaluate Machinery Purchases

Many farm management authorities claim that the great majority of our farmers have over-invested in farm machinery; they purchase large machines for small acreages in which case the overhead investment is too big. At a recent meeting Fred Hughes of Penn State suggested that farmers and bankers take a good look at machinery investments and be sure the volume of the farm operation will justify the investment. In many cases the work can be done by custom operators, or the purchase made in cooperation with neighbors, in order to make the investment a good one. The temptation for a new machine, or a larger piece of machinery is very strong on the part of many farmers. The question to answer is, "Will its useage pay for the machine?"

To Protect Milk Flavor

The grazing season is approaching when some milking herds will go to pasture; fresh grass may cause a "grassy" flavor in the milk flow and cause rejection by the milk dealer. This is especially true if the pasture contains wild garlic. If garlic is present, then dry cows or heifers should be used to graze the area for the first week in order to reduce the amount of garlic. Milking cows should be removed from any lush pasture at least 4 to 5 hours before the next milking period and kept in a well ventilated barn. Good herd management on fresh pastures is needed at this time of the year.

To Go Easy On Credit

Many farmers do need credit at various times of the year and this is often considered good management. However, with depressed prices of farm products and higher prices of inputs, producers are urged to be careful of not getting too much credit and then not being able to meet the payments. For example, to borrow money to expand the swine business when feeder pigs are bringing 80 cents per pound, might get a producer in the financial bind if he has to pay for the expansion with pigs worth only 50 cents per pound. This same situation might apply to rental costs on corn ground this spring, if the arrangements were made last fall when corn was worth much more. Use caution and planning in getting farm credit at this time.

Farm Calendar

Saturday, April 5

Manheim Young Farmers and wives bowling night.

Monday, April 7

7:30 p.m. - Manheim Young Farmers monthly meeting on Land Tax.

7:30 - 9:30 p.m. - Vegetable Gardening Meeting at the North Chester County Tech School in Phoenix.

8:00 p.m. - Lancaster County Poultry Association directors meeting at the Farm and Home Center.

7:45 p.m. - Eastern Lebanon County Soil Conservation District Planning meeting at the Elco High School vo-ag classroom.

Tuesday, April 8

7:30 - 9:30 p.m. - Vegetable Gardening Clinic meeting at the Community Center in West Chester.

6:30 p.m. - Ephrata Young Farmer's Ladies' Night at the Cloister Restaurant in Ephrata.

Thursday, April 10

7:30 p.m. - Elizabethtown Young Farmers meeting at the E-town ag classroom on Farm Management.

1:00 - 4:00 p.m. and 7:00 - 10:00 p.m. York County Home Ground Seminar meeting with topics on landscaping and planting techniques at the 4-H Center in Bair.

7:30 - 9:30 p.m. - Vegetable Gardening Clinic meeting at the North Coventry Grange in Pottstown.

7:00 p.m. - Berks County conservation banquet at the Berks vo-tech West

[Continued on Page 17]

Maryland Milk Producers Reorganize

Herbert W. Wessel Jr., Hampstead, Md., was re-elected president of the Maryland Cooperative Milk Producers, Inc. at its annual reorganizational meeting of the Board of Directors held March 28 in Baltimore.

Re-elected to serve with Wessel were Fred G. Butler, Inwood, W. Va., vice president; Boyd M. Cook, Boonsboro, secretary, and LeRoy E. Norfolk Jr., Randallstown, treasurer.

Elected as members of the Executive Committee were Richard F. Price, Phoenix; Jesse I. Burall, Monrovia, and Samuel B. Foard Jr., Street.

The Board's reorganization came less than a week following the Cooperative's 40th membership meeting held at the Hunt Valley Inn, Cockeysville. Close to 700 members and guests attended the meeting which saw the ratification of six directors to the MCMP Board and special awards presented to long-time members of the Cooperative and to those who excelled in the Quality Awards program during the past year.

The six dairymen named to terms on the MCMP Board of Directors are Samuel B. Foard Jr., Street; Melvin E. Leppo, Sykesville; Jesse I Burall, Monrovia; H. Bailey Herring, Farmington, Pa.; Raymond E. Schrock, Grantsville, and Earl B. Grove Jr., Hagerstown. Mr. Schrock was elected to a two-year term on the Board while the balance will serve for three years.

A total of 21 members of the MCMP were recognized for maintaining continuous family membership in the Cooperative and its prodecessor the Maryland State Dairymen's Association for 50 years or more. These included McComas B. Albaugh or Joyce J. Albaugh, Union Bridge; E'va W. Amoss or L. Willard Amoss, Fallston; A. Irwin Anderson or Garnet L. Anderson, White Hall; James W. Armacost, Upperco; Edward M. Beard or Bette J. Beard, Westminster; Crawford Briney, Havre de Grace; Clyde H. Brown, Dayton; Norman T. Condon Jr. or Gloria Condon, New Windsor; Melvin W. Cooper or Inez C. Cooper, Hampstead, and Paul A. Crowl or Elizabeth M. Crowl, Jarrettsville.

Also William C. Galbreath or Jean F. Galbreath, Street; Mrs. Mary B. Hughes or Robert R. Hughes, New Windsor; William F. Keefer or Doris C. Keefer, Woodsboro; Leo Merryman or Mary Merryman, Upperco; L. Lee Norris, Mt. Airy; Lester K. Osborn, Boring; Schaefer Farms, Reisterstown; Emma J. Smithson or R. Bruce Smithson, Fawn Grove, Pa.; Nellie K. Walter or H. Smith Walter, Forest Hill; Nellie K. Walter or Charles E. Walter, Bel Air, and H. F. Whipperman, Freeland.

One hundred thirty eight of the Cooperative's members were awarded special honors for Quality Milk Production. Ten of these received the MCMP's highest award the Bronze Plaque for Excellence. The qualify these members earned a place on the monthly Honor Roll each month of the year, maintained on-farm inspection scores averaging at least 99 out of a possible 100 points, had no quality problems, off-odor rejections or other quality deficiencies during the year.

The ten Bronze Plaque winners for 1974 were H. Howard Barkdoll or E. Geneva Barkdoll, Boonsboro; Elmer S. Cochran or Catherine M. Cochran, Phoenix; C. Glenn Daughtery or Delores J. Dougherty, Greencastle, Pa.; Robert L. Grove or Norma M. Grove, Greencastle, Pa.; Herman M. Kempske or Thelma L. Kekpske, Parktin; Herman L. Muller, Westminster; Bessie C. Murray or Calvin M. Murray, Mt. Airy; Panora Acres - Norman E. Sellers or Paul L. Sellers, Manchester; Glenville L. Shade or Curtis Shade, Inwood, W. Va., and Talmadge D. Wilson, Mt. Airy.

The Maryland Cooperative Milk Producers, Inc. was founded in 1918 and known until 1935 as the Maryland State Dairymen's Association. The largest Maryland based milk marketing cooperative, the MCMP marketed more than 560,000,000 pounds of milk in 1974 valued at more than $50 million. Its membership of 960 dairymen comes from all parts of Maryland and adjacent areas of Pennsylvania, Virginia and West Virginia.

Coffee Consumption

On a typical midwinter day close to 70% of all persons over ten in the U.S. drink a cup of coffee. Those between the ages of 30-59 have the highest per capita consumption rate.

MAURICE F. WELK OF QUARRYVILLE, RD2
HAS 18 COWS THAT FINISHED OVER 20,000 LBS. OF MILK THIS PAST YEAR

Maurice says, "I like to feed green hay. In my mind there is no better feed for high producing dairy cows. I can put more and better hay in my mow by using **Silo King** because I can start baling an hour or two before the hay would otherwise be fit to bale. By baling at 20 to 25 percent moisture I can preserve more of the leaves that contain most of the protein. Have you ever said 'If I only had one more hour of sunshine I could bale that field of hay'? By using **Silo King** I can go ahead and bale it and cut my risk of weather loss by one full day.

I find that application of **Silo King** is simple with the use of a Gandy applicator mounted directly on the baler."

LANCASTER COUNTY DHIA MONTHLY REPORT

FEBRUARY 1975

A Registered Holstein cow owned by Marvin L. Weaver R1, Ephrata, completed the highest 305 day lactation. Bev produced 21,610 lbs. of milk, 960 lbs. of butterfat with a 4.4 percent test. Second high lactation was completed by a Registered Holstein cow owned by Paul B. Zimmerman, R1, Ephrata. Agnes produced 23,068 lbs. of milk, 903 lbs. of butterfat with a 3.9 percent test in 305 days.

The herd of Ben K. Stoltzfus, R1, Box 239A, Gordonville, had the highest daily butterfat average. This herd of 35.0 Registered & Grade Holstein cows averaged 65.7 lbs. of milk, 2.39 lbs. of butterfat with a 3.6 percent test. The herd of Earl N. Landis, R1, Manheim, placed second. This herd of 49.9 Registered & Grade Holstein cows averaged 58.0 lbs. of milk, 2.17 lbs. of butterfat with a 3.7 percent test.

FIRST 305 DAYS OF LACTATION WITH 640 OR MORE LBS. OF BUTTERFAT.

HERE'S THE CORN
VORIS VIGOR-PROVEN

V-2662 - 125 Day Maturity
Very Dependable, Large Ears, Heat & Leaf Disease Resistant, Deep Kernal.

V2642 - 119 Day Maturity
A Champion. Short-stalked, upright leaf, with a really high yield and potential. Moderately high population.

V2622 - 116 Day Maturity
Exceptionally healthy hybrid with rugged, dependable yields where ever it goes. One of the finest silage hybrids.

V2582 - 114 Day Maturity
By demand A special hybrid for the East, large-eared, excellent stalk, and fast drying

V2552 - 113 Day Maturity
This is a high population hybrid. Pour on the fertilizer, early tasseling and silking a high yielder.

V2332 - 90 Day Maturity
Tremendous yield potential. Early. Fast drying. High yielder. Picks and shells beautifully.

ATTENTION
CORN GROWERS
ADD SPRAY ADJUVANT
TO YOUR ATRAZINE SOLUTION

Did You Know

SPRAY ADJUVANT increases the herbicide's effectiveness on weeds.

SPRAY ADJUVANT Complies with Federal Regulations, Approved by FOOD & DRUG ADMINISTRATION.

SPRAY ADJUVANT added to Atrazine solution, COSTS LESS Than using Atrazine alone. YES! COSTS LESS.

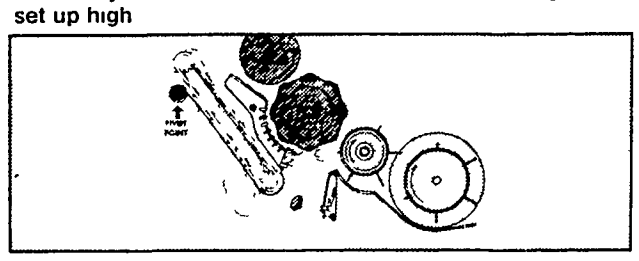
GLEANER Combines

give you extra-bushel capacity.

One of the reasons for the extra harvesting capacity and efficiency of GLEANER Combines is the down-front cylinder An exclusive design that cuts the distance your crop has to travel only 15½ inches from the back of the header to the cylinder And this reduces bunching, choking and uneven cylinder wear All other combines have the cylinder set up high



Other exclusive features center-line design for balanced weight distribution low center of gravity, all-around visibility two and three-stage separation puts more grain in the bin, safety concave door automatically ejects rocks and other potentially damaging objects that enter the cylinder and concave area

All this is just a part of what makes GLEANER Combines so great Ask your Allis-Chalmers dealer for the rest

FACTS FOR DAIRYMEN

by
N. Alan Bair
Associate
County
Agricultural
Agent

From Barn to Pasture

Dairymen all over Pennsylvania look forward all winter to these next few weeks when we can get the cows and heifers out on pasture. There are many valid and some questionable reasons for this practice, so give some thought before opening the pasture gate too soon.

On the list of benefits for getting the animals outside as soon as possible would be exercise, sunlight and green grass for vitamins, and probably the biggest incentive to the dairymen—just getting the overcrowded animals out of the barn that is poorly ventilated and desperately needs the manure hauled.

But what about the potential hazzards or problems with putting dairy animals on early spring pasture? Your concerns should include sufficient nutrient intake, poisonous plants, and on milking animals also consider milk quality and mastitis control.

Just yesterday I saw a whole herd of cows on new pasture—pasture that was just starting to get green. With a lawnmower and vacuum cleaner I doubt that you could have harvested 100 pounds of dry matter from the entire 20 acres. The point is , don't expect animals to maintain themselves on such a pasture. You must continue to supplement them with at least some dry hay for young stock and a complete ration for milking animals. Even as pasture becomes more lush don't overlook adequate nutrient intake, including minerals.

A very real danger in early pasturing is the possibility of poisonous plants. Animals don't normally eat these not-too-tasty plants, but given the proper circumstances of hunger and craving for something green can result in real trouble. Some of our most poisonous plants, like the hemlocks, are already several inches high and look inviting to a hungry animal.

Milk quality probably suffers more than anything else during spring pasture season. The grass and garlic off-flavors are real problems. The flavor problems can easily be overcome with well known management practices like removing the strong feed several hours before milking. A reduction in milk quality will probably hit you in the milk check quicker than anything else.

It has been the experience of many dairymen that when they do put the cows on pasture the herd experiences mastitis flareups. The cause is usually given as cows laying down on cold damp ground. This may compound the problem but the more likely cause is the sudden change in feeding and management and the resulting stress. This is the real key to all of the stated problems and the solution to these problems. Make a gradual change from barn feeding and management to pasture feeding and management.

This gradual change means feeding animals before putting them on pasture, and removing them from the pasture several hours before milking. The feeding program should gradually change as the pasture becomes more available and the animals become more accustomed to it. Observe new animals on pasture often. Who knows, they may find that hole in the fence you forgot about!

New 4-H Horse Program Aids

"Horses have not been outstanding on limited intelligence tests although they do complex things routinely when trained," says Dr. Melvin Bradley, author of a new lesson, Practical Horse Psychology for 4-H members.

Project leader and extension horse specialist at the University of Missouri, Columbia, Dr. Bradley also points out that "horses usually are considered to have memories second only to elephants. Thus a well-trained young horse never forgets his training."

The lesson is one of 10 recently completed for national distribution by a 4-H horse program committee of state extension specialists. Development of the lessons, including visual aids and a worksheet, is made possible by the support of Purina Horse Chows, Ralston Purina Company, and the National 4-H Service Committee, Chicago, is coordinating production and distribution of the new aids.

With plans for the eventual development of some 75 separate topics, the currently available lessons run the gamut of young horse owners' interests. Individual lessons treat breeding, riding, health, safety, training, hoof care and horse showing.

Assisting Dr. Bradley in the development of the educational aids are leading extension horse specialists from across the nation. They include William Culbertson, Colorado State University, Fort Collins, Dr. S. W. Sabin, Cornell University, Ithaca, N.Y., Gary Potter and B. F. Yeates, Texas A&M University, College Station, and Dixon Hubbard, U.S. Department of Agriculture, Washington, D.C. These and other experts are sharing the authorship of the educational aids sponsored by Purina Horse Chows.

According to figures released by the Cooperative Extension Service interest in horses is expanding rapidly among 4-H members. Enrollment in 1973, the last available figures, approximated 326,000 members, a 10 percent increase over 1972. And in the past five years, 4-H horse program enrollment has increased a whopping 45 percent.

While the new educational materials have been developed for youth, adult horse enthusiasts may find them equally useful, say development committee members.

For information about local 4-H horse program activities and participation opportunities contact the county extension office. Inquiries regarding the new educational aids may be directed to the National 4-H Service Committee, 150 N. Wacker Dr., Chicago, Ill., 60606.

composer), was honored as "Male Vocalist of the Year" and "Songwriter of the Year" three times. A Billboard Magazine poll recently named Bill as one of the "Three All-Time Greatest Country Music Songwriters."

With him will be country songstress Mary Lou Turner, formerly with the Wheeling Jamboree and rising fast in country music ratings. The show also features Jimmy Gately, who has been singing country and folk music since 1951 and is one of the circuit's premiere singer - instrumentalists. Providing background and harmony for the stars will be "The Po' Boys," a quintet of musicians and singers who have also recently become recognized in country music circles as outstanding.

The show at Millersville will be the only appearance of the Bill Anderson group in this area. Advance tickets are priced at $3.50 (they will be $4.00 at the door). They are on slae at Camelot Music, Park City; Shenk Bros., Lancaster; Student Center, Millersville State; and Turkey Hill Minit Markets at The Buck, Quarryville and Gap.

Pa. Ag Bankers Confer On Farm Loan Outlook

(Continued from Page 1)

increase in Southeast Pennsylvania."

Hughes said he feels bankers should work with their clients on estate planning, and should be especially careful to ask their farm customers how they plan to handle their estate settlements.

"But don't try to do the whole job of estate planning yourself," he warned the bankers. "Estate planning demands a team approach, and you might have to get help from an attorney, a CPA and an insurance man."

In some cases, Hughes said, a good estate plan could mean the difference between transferring a farm to the next generation or being forced to sell it to pay estate taxes.

Dr. Virgil Crowley stressed the importance of cash flow for farmers in several appearances before the bankers. "Capital requirements for agriculture have increased tremendously in recent years," Crowley said. "Because of this, it's become crucial for both the farmer and his lender to know what the cash flow will be."

Crowley said cash flow projections can indicate when funds will be available for debt payments, and they can also be valuable guides in deciding whether or not a particular farm enterprise will be profitable.

Cash flow records show not only how much money comes into a farm, but exactly when it comes in. And it also shows the amount and timing of expenditures.

Crowley said most farmers have a pretty good idea of how much they make and how much they spend, but they don't know the specific dates.

By using cash flow figures, Crowley told the lenders, they could project the business four or five years into the future. They could also get a good idea of the farmer's nearer term expectations, and they could spot potential trouble spots.

The best cash flow records normally come from dairy farmers, Crowley said, because they have a fairy steady level of income throughout the year. Crop farmers, orchardists and livestock producers who get big chunks of income at one time have a harder job of keeping track of and managing their cash flow figures.

"It's quite possible," Crowley pointed out, "to have a reasonably good business and yet not have enough cash flow to keep it going."

On Wednesday afternoon, the bankers piled into three chartered buses to visit two farms close to their convention site. The first was the Noah Wenger farm, a 107-acre beef and layer operation at Stevens R1. Wenger told the bankers he has 12,000 caged layers and usually feeds about 150 steers. "This year we're down to 110 steers, because I was a little concerned about the way the markets have been.

"All the work on our farm is done by myself and my family. We have the kind of farm that everybody in Washington talks about, but that nobody down there does anything about."

The bankers asked Wenger some probing questions about his cash flow, estate planning, accounting and marketing patterns.

One of the money men summed it all up when he asked, "How do you feel about the future of the beef business for the young farmer?"

"I'm optimistic," Wenger replied. "I know we hear a lot about feeding corn to people instead of steers. But you know, I've eaten corn meal mush. I wouldn't like to eat it all the time, and I think a lot of people are the same way. If we can put out the kind of beef that people want to buy and can afford, I don't think we'll have any trouble staying in the beef business."

From the Wenger farm, the party went to see a beef farmer turned dairyman, Raymond Burkholder, Lititz R4. "Why," he was asked, "did you switch from beef to dairy?"

"Well, I was in the beef business back in 1952," Burkholder repiled. "Steers were doing about as well as they are right now, and I decided it was a good time to get out. We started in the dairy business with nine cows, and now we've got 80 milking. We're tied down a little bit more, but I think there's more money in dairying."

The bankers asked Burkholder the same kind of questions they had put to Wenger, but zeroed in on his plans for expansion.

"We'd like to get a little bigger," Burkholder said, "but ground here costs so much. It's even getting expensive to rent. I bid $90 an acre on some corn ground for this spring and I didn't get it. Somebody else had the corn market figured the way I did at $4 a bushel, only he turned in a bid that was higher than mine. And the way things have turned out, I'm really glad he did."

On Wednesday evening, the bankers heard from one of their own, Derl I. Derr, who heads up the ag division for the American Bankers Association in Washington, D.C. "The future of agriculture depends very much on bankers," Derr told his colleagues. "Pennsylvania alone has $470 million in farm loans outstanding, and 60-percent of those loans came from commercial banks. Ag bankers will have to keep themselves well-informed if they're going to serve their customers and their communities well in the years ahead."

Nationally, Derr said ag lenders were faced with four main pressure points. The first of these is the changing dimensions of ag lending. On January 1 of this year, there were $94 billion in outstanding farm loans. Derr expects to see this figure increased to $150 billion by 1980. He said farm loans are getting bigger and they're being written for longer terms than before.

The second main pressure point on commercial farm lenders, according to Derr, is the aggressive expansion of the government lenders. These are the Farmers Home Administration, Federal Land Bank and Production Credit Associations. "The federal farm credit system is moving rapidly into more and more special programs for farmers. They're offering a wider range of services, and they're telling farmers about those services with a massive advertising and public relations program.

"Commercial lenders will always be able to compete with the federal lenders for the short term loans. But we must guard against the dangers of having just one long-term farm lender," Derr said.

The other two pressure points stressed by Derr were the inherent high risk in farm loans, and the increased competition for money.

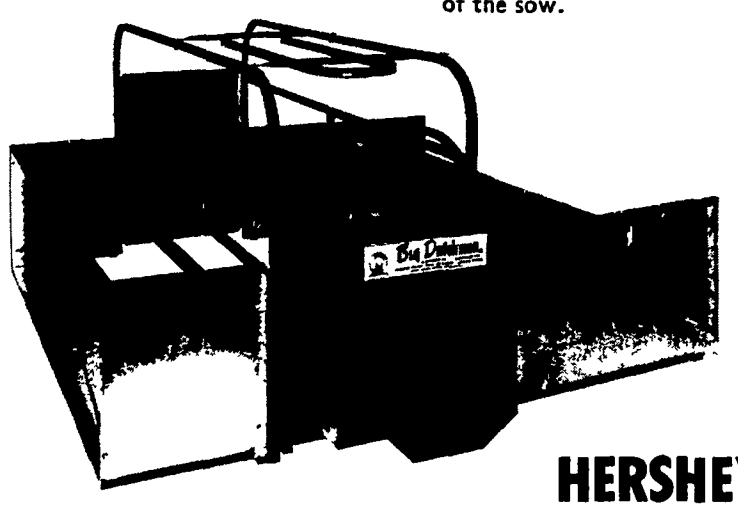
A "LITTLE LITTER" HURTS ...in fact too many Little Litters can put you out of BUSINESS

BIG DUTCHMAN SOLVES THE "LITTER" PROBLEM.

Mortality rates due to scours and accidental crushing have been significantly reduced by the farm tested and farm proven Big Dutchman farrowing system; a complete system designed and built by people who understand the sow and her needs. The farrowing unit construction features embossed draft panels, heavy galvanized side walls, adjustable bottom rails, welded steel tubing joints, doors that open at either end, welded steel bars, 17-gauge square steel tubes, feeder adaptable to either dry or liquid feeding and a back up bar adjustable to the size of the sow.



When used with exclusive Big Dutchman electric heat mats, properly placed Aluminum slatted floor and controlled ventilation, this unit provides an ideal farrowing arrangement and a disease-free environment.
If you are concerned about today's litter problem, see us. We'll help you "solve" the litter problem.

Feed Milk Replacer No. 22
Good dairymen know the importance of getting newborn calves off to a healthy start and getting mother back in the string. That's why Vigortone developed Milk Replacer No. 22. This easy-to-mix product contains high levels of important vitamins, minerals, antibiotics and milk proteins. Your calves will do better, and you'll save money because you can market all of the whole milk you get.

New 18% Calf Starter Formula
After calves are settled on Milk Replacer No. 22, introduce Vigortone's 18% calf starter formula. This highly fortified ration is built around Kalf Ayd No. 23 — a potent blend of vitamins, minerals, trace elements and antibiotics. By using your own grain, you can grind and mix this 18% ration and enjoy big savings over the cost of a commerical starter.

A 14% growing ration for heifers
Vigortone also has a 14% growing ration for heifers that can be introduced at 15 weeks of age. This special ration can be built at a substantial savings and should be fed at specific levels until maturing heifers are ready to go into the production line.

Check with your Vigortone serviceman for all the details on Vigortone's new lifecycle feeding programs for dairy. You'll soon learn why more dairymen are feeding Vigortone — especially now.

Along with her duties as president of the Broken Bit 4-H Horse Club, Natalie Immel shows and trains horses. One of her favorites is a 4-year-old Quarter Horse.

Natalie Immel

Showing Horses Is Her Hobby

[Continued from Page 1]

recently completing a booth exhibit for the 4-H expo.

A member of the County Horse Judging team for the past four years, Natalie has competed at 4-H State Days and has placed high individually in many contests.

Natalie has done numerous demonstrations for the Broken Club and has done promotional work for the 4-H by preparing radio tapes.

Along with traveling on the show circuit this summer, Natalie will be presiding at the Broken Bit meetings. When asked just what duties she would be taking on, Natalie replied with a smile, "we have quite a few activities planned for the coming weeks including a trail ride and horse show."

"I'll be helping with those as well as fund raising projects."

The Broken Bit Club is a family affair for the Immels, as Natalie's parents, Mr. and Mrs. Chester Immel are leaders along with Robert Gregory.

Natalie explained that her riding had come naturally, as her parents have always been interested in horses.

"My parents had horses for quite some time and I just naturally started riding when I was young."

Natalie's success as an equestrinne and trainer is well evidenced by the numerous trophies, plaques and ribbons that decorated the Immel's home.

Although the county miss rides in many prestigious shows, she still believes that her favorite is the County 4-H round-up.

"I'd have to say that the County 4-H Round-up was my favorite since I could compete with my friends, we always have a good time."

County shows as well as many out of town events will soon be taking place although Natalie's one priority will be graduating from high school as well as finishing her cosmotology program at a county vo-tech school.

But when summer rolls around Natalie will be off on the show circuit again, riding and training her Quarter Horses - a hobby she'd like as a career.

Conservation

(Continued from Page 1)

Association, told the committee that while PFA is opposed to more government regulation, they do realize that some farm owners and operators have a reckless disregard for the soil, and that some of these cases could only be corrected by government imposed actions.

"But," he said, "we'd also like to point out that farmers share a common goal with DER: preservation and improvement of environmental quality. Indeed, farmers have a vested interest here, and a sincere concern. The environment is the farmer's living. He uses the land, air and water to produce food."

Heim pointed out three major reservations he and the PFA had about the 1977 deadline. He asked:

1 - How will DER deal with those farmers who have applied for a farm conservation plan before the deadline, but have not yet had one designed and implemented because of the demands placed on the under-finanaced and understaffed Conservation District office?

2 - How does DER plan to educate their field staff on matters of the Erosion Control Regulations as they apply to agriculture?

3 - In order to adequately judge implementation of a farm conservation plan, one must know something of contemporary agricultural practices. Does DER plan to familiarize their enforcement personnel with this area?

Heim also voiced serious concern over the DER definition of animal wastes as sewage. "Manure is a valuable resource," Heim said, "and any regulations that might prohibit farmers from spreading it on their land - as they've traditionally done - will hurt food production."

There are many farmers opposed to the regulations, Heim noted. "But I think much of the opposition come from the fact that there's a lot of misunderstanding concerning the regulations. Farmers are in favor of sedimentation and erosion control, and they favor an approach silimar to DER's. But they definitely don't like having government agencies telling them what to do. If DER wants to help farmers control sedimentation, then they'll have to do a much better job of communicating with farmers through extension, farm groups and so forth. If there's more communication, I feel certain a lot of the opposition will disappear."

The committee heard from several people during the day that seemed flatly opposed to DER regulation of farm erosion. One was a Franklin County surveyor who told the hearing, "I have yet to talk to anyone who thinks farm pollution is a problem at this time. I think 90 percent of all farmers use some conservation practices, especially on steep slopes and next to waterways. Only on out of ten farmers don't do anything."

Keith Eckle, a Lackawanna County dairy and vegetable farmer, asked the committee, "How much environmental quality can we afford? Who will pay the cost, how much will agricultural production suffer, and who makes the decision as to whether we devote ourselves to clean streams or growing food?"

In Northeastern Pennsylvania, Eckle pointed out, the conservation problem is greatly complicated by the fact that many of the best farmers till considerable acreages of rented land. He said farmers wouldn't be willing to spend money on censervation practices for rented land, nor would landlords who were getting only $15 to $20 an acre yearly rental. "Why should a landowner pay for terraces when he's just holding the land for development anyway? Terraces won't increase the value of rental land at all, and they could decrease the resale value. Unless you solve the rented land problem, conservation regulations are going to put a lot of our best farmers out of business."

Eckle also doubted the conservation measures always paid off in production increases or better soils. "If we do as bad a job of farming as people say we do, we'd have run out of topsoil long ago."

George Wolff, a member of the Lebanon County Conservation District board of directors, defended conservationists.

"I have terraces on my farm because I think they're a definite net worth factor," he said. "The cost of my terraces was minor because I had them done when the federal government, through the Agricultural Stabilization and Conservation Service, was paying 80 percent of the bill.

"But farmers don't always need terraces to solve their erosion problems. And for those who do, there will still be money available from Washington for some conservation practices."

This hydraulic-reset plow has exclusive double-pivot standards that rise as high as 26 inches

Any bottom on a 2500 Power-Reset Plow can clear any rock that passes under the tractor drawbar. Exclusive double-pivot design lets the bottom move back and up past a vertical position—up to 26 inches above the furrow floor as shown here.

Hydraulic power provides the action—and controlled hydraulic return helps the bottom re-enter the ground at nearly the same angle as original entry. An exclusive valve lets you adjust down-pressure to match your field conditions and plowing speed.

Choose these 18-inch plows in 4- to 8-furrow sizes Drop by soon and learn more about light-draft 2500 Power-Reset Plows.

Cong. Ed Eshleman Tours Area Farms

Congressman Edwin D. Eshleman toured Lancaster County farms on Monday of this week to talk to area farmers. He discussed national farm and economic policy, and listened to the suggestions and views of the farmers. This reporter joined the party in the livingroom of the Noah Wenger farmhouse at Stevens R1.

The Congressman first addressed himself to the emergency farm bill passed recently by both the House and the Senate. The two bodies passed differing versions of the bill which is now in a joint conference committee and due to be reconsidered in the next few weeks.

One of the bill's key features approved by both houses is for target prices for major farm commodities. The target price for wheat, if the bill is enacted into law, will be $3.25 per bushel. The corn target price would be $2.25 per bushel, and for cotton 48 cents per pound. "The target prices for corn and wheat don't bother me that much," Eshleman said, "but the cotton price is way too high. At 48 cents a pound, cotton growers will be encouraged to grow for the government instead of the market, and some estimates say that the cotton subsidy alone will clost half a billion dollars."

Eshleman pointed out that he voted against the farm bill because it involves new spending. "On any bill, my first question is whether or not we can afford it, and if we can't, then I'll automatically vote no. I don't think we can afford this farm bill. If we pass it, I've heard that it will be costing the U.S. government $5 billion in payments, storage and administration by 1977."

Speaking on the general economy, Eshleman said he feels the nation will get a three to six-month shot in the arm from tax cuts and rebates, but he's worried about the $75 billion deficit projected for the fiscal year ending in July, and the $100 billion deficit expected by the end of next year. "When I started in the Congress eight years ago, the whole federal budget was less than $100 billion," he pointed out.

Noah Wenger, the host, told the Congressman's party that he feels farmers have made a tremendous contribution to the economy, a fact borne out by the vastly increased exports of the past few years. "If industry could have matched the production increases that farmers have experienced, maybe we wouldn't be in so much trouble now," Wenger said.

Wenger also pointed out that the cost of growing food keeps going up, and one of the biggest factors in years to come will be the farmer's expense in keeping the environment clean. "There's only one way farmers can get back the money they spend on environmental measures, and that's to get more for the food they grow," he said.

Eshleman noted that this was a valid point, but said that farm groups should spend more time telling their story to urban legislators. "No legislator is an expert in everything, and I think if you'd educate some of our city lawmakers they might understand farm problems better and be a little more responsive."

One legislative area Eshleman feels the Congress may move on soon is the Capper-Volstead act which exempts farm cooperatives from anti-trust legislation. "There could be some action against cooperatives this year," he said. "I'm sure they wouldn't be made illegal, but I do think we might see some changes. The consensus of opinion seems to be that it's okay for co-ops to help farmers get supplies or to help them market their products. But when a co-op is involved in both ends, then you run the risk of price fixing and other abuses."

Other farms visited on the tour were: James Hess, Quarryville R2; Jacob Groff, Holtwood R1; Arthur Rohrer, Paradise R1; Robert Book, Leola; and Noah Wenger, Stevens R1

Charles Receives Recognition

Mung Beans - Your Newest Cash Crop?

(Continued From Page 1)

twice market price for soybeans that day. In other words, if soybeans are selling for $6, Chu will pay $12 a bushel for mung beans.

Chu already has four Lancaster County growers lined up, and they'll be putting in about 40 acres in all this year. He said he would be willing to contract a crop with any growers who are interested, but that he wouldn't let the total of all his contracts exceed 100 acres for this year.

An ample supply of seed is available from Chu. Since he is not a registered seed dealer, Chu said he cannot sell seed. Instead, he plans to give seed to growers and would expect them to return as much seed as they got after the crop is harvested.

Chu's idea certainly sounds interesting. And if mung beans yields compared favorably with soybeans, area farmers would have a pretty compelling reason to line up on Chu's doorstep. Chu makes no predictions about mung bean yields, but he did say that soybeans will definitely outyield them. The best recorded yield of mung beans in California was 20 bushels to the acre, about half that of a good soybean crop. It doesn't take a very sharp pencil to figure that a crop with half the yield, even though it sells for twice the unit price, still returns the same net.

Chu's plan, nevertheless, will no doubt appeal to some innovators and experimenters who are willing to speculate with a few acres of the new crop. Mung beans could provide an unusual sidelight to the 1975 growing season for the farmer who cares to try them. And if you decide to grow mung beans, one of the most delightful parts of the experience, whether or not it turns out to be enormously profitable, will be in meeting Moses Chu.

Chu is a native of mainland China, having left his homeland during the Communist takeover. He lived for several years in Hong Kong, traveled extensively in Southeast Asia and finally, about 20 years ago, moved to Tanzania, on Africa's East Coast. There he entered the textile business, becoming a key figure in that industry. Two years ago, at the urging of his grown children, Chu again tore up his roots to become a 58-year-old emigrant to the U.S.

Chu's son, an MIT-educated engineer living in Boston, urged Chu and his wife to live with him. But the elder Chu said he'd rather not risk becoming dependent on his children. "It's important for me to be able to work," he said. "If I ever get too old to do anything, maybe then I might go with my children." Chu also has two daughters, one an occupational therapist at New York City's Mt. Sinai Hospital.

It would be hard to imagine Moses Chu idle. During our interview with him, he kept popping up and down to answer the phone at his combination home, office and African art shop on busy Route 30 east of Lancaster.

African art shop? Yes. it was Chu's first business venture when he came to this country. The artifacts which he brought with him from Africa are carved from solid blocks of ebony by the skilled hands of mountain tribesmen. He is still importing the sculptures which he sells to tourists as well as Lancaster Countians.

And he's in the bean business, too. Chu said any Lancaster Farming readers who might be interested in growing mung beans are welcome to call him at 717-687-8751, or write to Moses Chu, P.O. Box 202, Paradise, Pa. 17562.

NOW FOR THE GOOD NEWS

C.B. CLAWSON, HIS WIFE, OLIVE, AND THEIR EIGHT CHILDREN SPENT FOUR YEARS AND HARD-EARNED MONEY FIXING UP A TWO-ACRE RECREATION SITE IN A DESERT AREA ON BOWIE HIGHWAY NEAR SAFFORD, ARIZONA. THEY FELT MANY OTHER FACILITIES IN THE AREA WERE TOO COMERCIALIZED. THEIR PARK IS CALLED "TIERRA DE AMIGOS"—"LAND OF FRIENDS"—AND IT IS OPEN TO ALL RACES AND GROUPS.

The satisfaction that comes from doing a good job of farming

It's a great feeling to know that you are the master of your farmlands . . . that when you treat your soil right, it will treat you right. Liming is one of the most important factors in keeping your soil in the highest productive range. A good pasture with a pH of 6.5 or higher, for example, will make 300 to 400 lbs. of beef per acre and produce up to $100 gross income per acre. This means with the help of lime, profits from pastures can compare favorably with feed or grain crops.

Vaccinated Heifers For Health

If your herd is located in an area where brucellosis is a problem, it makes sense to only raise or buy replacement heifers which have been officially vaccinated for the disease. This is no absolute guarantee against brucellosis infection entering your herd, but it will improve the general population's resistance against the disease.

But how do you identify an "official vaccinate?" First thing to do is check the ear tag and tattoo. They can tell you a lot. The standard tattoo code works like this:

There's a U.S. registered shield with letter "V", preceded by a number indicating the quarter of the year, and followed by a number corresponding to the last digit of the year in which the animal was vaccinated.

This tattoo in the dairy heifer's right ear identifies her as an official vaccinate, meaning she was vaccinated with Brucella abortus Strain 19 vaccine To qualify as an official vaccinate, a dairy heifer must be vaccinated between two and six months (60 to 179 days) of age. Also, vaccination must have been performed by a qualified person (an accredited veterinarian or regulatory official) and recorded by the appropriate state or federal agency cooperating in brucellosis eradication.

Also at the time of vaccination, a metal tag is fixed to the right ear. The tag number is recorded on the vaccination record or certificate.

The best record of vaccination is the official vaccination certificate. So if things don't look quite right — tattoos smear when rubbed or tags look shiny and new — then check with your state or federal animal health officials. Chance are, they can quickly verify — or discount — the authenticity of the vaccination.

Officials of U.S. Department of Agriculture's Animal and Plant Health Inspection Service (APHIS) recommend calfhood vaccination:

— For herds located in areas of relatively heavy brucellosis infection (including the states of Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, Missouri, Oklahoma, Tennessee, and Texas).

— For herds in brucellosis-free areas which supply replacement heifers to dairymen in other states — notably Florida and California

APHIS officials also recommend vaccination as soon as possible after female dairy calves reach two months of age — to reduce carry-over problems. Normally, vaccine-induced blood titers (levels of antibodies in the blood) subside by the time an animal is mature and eligible for blood testing. If overage when vaccinated, however, a residual antibody titer can cause positive reaction to diagnostic blood tests.

Also to be considered, Strain 19 vaccine is a "live" product, meaning it must be properly handled to assure its viability and potency. Lack of refrigeration or excessive heat can spoil the vaccine.

So it's important that vaccination be done at an early age, by qualified people and that accurate records be kept.

Dairymen should also be aware that three states — California, Michigan, and North Dakota — don't allow dairy cattle over the legal vaccination age to be imported if they haven't been officially vaccinated as calves.

No vaccines are perfect, and Strain 19 is no exception. But when properly administered, Strain 19 will provide protection to 60-65 percent of the animals against average exposure to disease. It will also reduce disease symptoms in other animals within an infected herd.

With these advantages, buying official vaccinates does make sense!

Consumers' Corner

Nutrition Labels

Many Americans are well fed but undernourished The Food and Drug Administration has issued nutrition labeling regulations as a safeguard for consumers

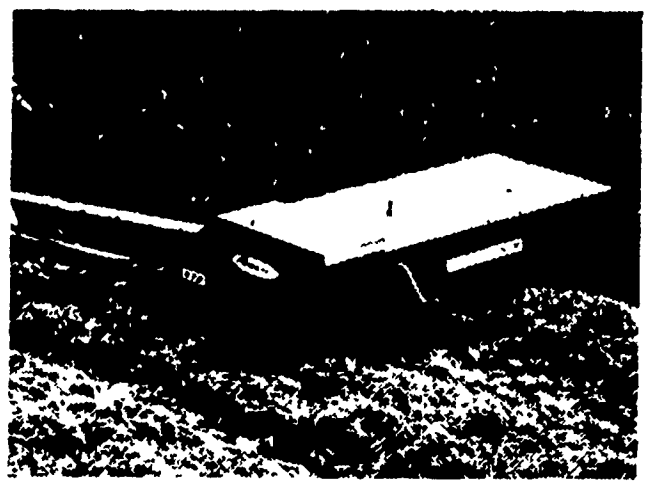
More and more food packages have labels stating the product's nutritional value As a result the consumer is becoming more aware of the nutrients essential to good health Consumers are better able to recognize and compare nutritive values and costs of different foods It is thus easier to select a combination of foods that will together supply all the essential nutrients

The nutritional content for a serving is described two ways First, by the number of grams per serving of protein, carbohydrates, and fat Second, by percentages of the U S Recommended Daily Allowances (U S RDA) for protein and at least five of the vitamins and two of the minerals considered to be daily diet essentials by the Food and Drug Administration

One fourth of the day's calories, vitamins, and minerals can be obtained from the breakfast meal

As you become more familiar with the nutrition labels you will be able to plan more nutritious meals and be on the road to better health

New Idea's NEW "Hay Thing"



Makes hay that cattle like better

Introducing New Idea's advanced 7-foot Cut/ditioner— a field-proven machine that makes quality hay in rank, heavy first cutting, or thinner later cuttings It cuts cleanly and conditions gently Makes soft, palatable hay with rich, protein-filled leaves and tender tops that cattle prefer Won't plug—even in long, rank and down hay

This new "Hay Thing' can also be used as a tedder or to turn windrows And it does a lot of other jobs, such as clipping, cutting and shredding

All this, plus low first cost and trouble-free operation New Idea's advanced Cut/ditioner — the new "Hay Thing"

Lancaster Dominates FFA Dairy Products Contest

Judging teams from the Annual FFA Area Dairy Lancaster County dominated Products Judging Contest held Thursday, April 3 at Penn Dairies, Hempfield Rd., Lancaster.

The five member team from Ephrata High School captured first place in the event for the second year in a row, edging out Solanco's chance for victory by only a few points. Lampeter-Strasburg took third place honors with Penn Manor capturing fourth place to hold Lancaster County dominate in the team competition.

Other teams competing included Red Lion High School from York County and Oxford High School representing Chester County.

In the individual competition, Peggy Stottlemyer,

Peggy Stottlemyer, Solanco High School, won first place in the individual competition at the Dairy Products Judging contest held April 3 at Penn Dairies.

Dr. Charles Levak (left) Penn Dairies presents the first place trophy to the Ephrata High School judging team during the Annual FFA Area Dairy Products Judging Contest held on April 3. This was the second year in a row that the team coached by Ernest Orr had taken first place honors.

representing Solanco High School placed first with Dale Martin of Ephrata capturing second place honors. Kurt Strohmaier, Oxford placed third.

Other individuals placing in the top ten category included: Tim Wilson, Lampeter-Strasburg - 4th; John Sabatine, Penn Manor 5th; Jeffrey Bollinger, Lampeter-Strasburg - 6th; Jeff Rutt, Solanco - 7th; Ron Martin, Ephrata and Dennis Martin, Ephrata tied for 8th with Ricky Sewigart, Ephrata - 10th.

The 35 students participating were asked to judge the quality of cottage cheeses and milk and to identify nine different type of cheeses.

Ernest Orr, agriculture instructor at Ephrata and coach of that school's team, coordinated the area contest with Dr. Charles Levak, Penn Dairies, in charge of the event.

The Ephrata Team which was comprised of Dennis Martin, Stevens R1; Rick Sweigart, Lititz R4; Ron Martin, Ephrata R3; Marty Hoover, Stevens R1; Dennis Frey, Lititz R1, and Dale Martin, Ephrata; received the revolving trophy sponsored by the Penn Dairies. Individual competitors were awarded merit ribbons.

The Bill Anderson Show, featuring Mary Lou Turner, Jimmy Gateley and the Po' Boys, will appear at a benefit program at Pucillo Gym at Millersville State College on Friday, Apr. 11. Funds from the show will benefit needy athletes at the college.

Superstar Headlines Country Music Show

Bill Anderson, rated a superstar in country music circles, will bring his nationally-acclaimed "Bill Anderson Show" to Lancaster County next Friday, April 11, for a benefit concert at Pucillo Gym at Millersville State College.

The show is being presented by the Millersville Century Club for the benefit of needy athletes at Millersville State, according to Eugene S. Rutherford, Sr., of Lancaster, club president. Show time is 8 o'clock.

The Bill Anderson Show has been featured on its own syndicated TV program, at the Grand Ole Opry in Nashville and in concerts throughout America and appeared frequently as a guest on the Mike Douglas Show, the Dinah Shore Show, *Hee-Haw and other well-known programs.*

Anderson has achieved superstar rating by both writing and singing hundreds of country and folk songs which have become hit records. He has received more than 40 B.M.I. songwriting awards (more than any other country music

PennDOT's Poor Conservation Irks Lancaster Co. Resident

Politicians, conservationists and newsmen converged on Martin Bauman's side yard on Wednesday afternoon. They came to peer into a 10-foot chasm which is eating away at Bauman's piece of mind as well as his property.

Until three years ago, the yard at Bauman's Ephrata R3 home was nice and level, as was the small sheep pasture behind the house.

But them the Pennsylvania Department of Transportation rebuilt the road that runs in front of the Bauman's three-and-a-half acres. The road was rebuilt because the new Route 222 went through at a spot which is about a quarter mile uphill from Bauman. Water from the new highway as well as the rebuilt state road flows in ditches on both sides of the road to a point just above Bauman's house.

Runoff crosses under the road via a two-foot pipe, and shoots out into Bauman's yard. Sometimes, Bauman told his visitors, the pipe is filled practically to the top.

Aaron Stauffer, chairman of the Lancaster County Conservation District, said the force of the water had carved out the gully, which is now at least 10 feet deep.

Stauffer said the responsibility for the gully lay with PennDOT, and he said they're working on correcting it. In an effort to correct the problem himself, Bauman spent some $200 of his own money on a concrete deflector to slow up the water, but torrents from several recent rains have already tunneled under the deflector. Accompanying Stauffer to the site were other members of the conservation district, Paul Paes, chairman of the Lancaster County Commissioners, and Harry Gring, a member of the Pennsylvania House who represents the Ephrata and Denver areas.

Aaron Stauffer, left, showed how deep Martin Bauman's ditch was by crawling down into it. Stauffer is chairman of the Lancaster County Conservation District. The 10-foot ditch on Bauman's Ephrata R3 property was created by runoff water diverted there by PennDOT. Lancaster County Commissioner Paul Paes (in checked coat) and Representative Harry Gring were with Stauffer when he went to view the ditch on Wednesday.

Layer Production Down

Pennsylvania layers produced 263 million eggs during February, four percent less than a year earlier, according to the Pennsylvania Crop Reporting Service.

The February average of 13.9 million layers was down two percent from the previous month and down nine percent from a year earlier.

Egg production per 100 layers during February totaled 1,896 eggs--down eight percent from the previous month but five percent above a year earlier.

Nationally, 4,995 million eggs produced during February was down four percent from a year earlier. Layers on hand during February averaged 282 million, five percent below a year earlier. The average rate of lay during the month was approximately the same as a year earlier.

4-H Capital Days Slated

Young adults and their leaders from the Commonwealth's 67 counties, including five from York County, will have an opportunity to broaden their knowledge of the functions of state government when they participate in State 4-H Capital Days in Harrisburg, April 7-8.

The county delegates and leaders selected to take part in the statewide event are: Joanne Zumbrum, daughter of Mr. & Mrs. Roy Zumbrum, 102 Grandview Rd., Hanover; Marsha Leckrone, daughter of Mr. & Mrs. Dale Leckrone, 36 Longview Rd., York; Karen Hemminger, daughter of Mr. & Mrs. James Hemminger, R1 Glen Rock; and Marvin & Martin Krone, sons of Mr. & Mrs. John C. Krone, Sr., R2 Glen Rock.

According to Marcy Seckman, Ass't Ext. Home Economist, the objective of State 4-H Capital Days is to provide an experience for 4-H members which will lead to a better understanding of their roles as citizens.

While in Harrisburg, they will meet with government officials including Lieutenant Governor Ernest P. Kline; observe the Senate and House of Representatives while in session; and tour the State Capitol.

Members of the House and Senate have invited the young adults to "sit in" while in session April 7. This will provide the 4-H members an opportunity to learn the roles of legislators.

Local lawmakers will be guests of the county delegation at a special breakfast on April 8. At this function, 4-H members and legislators will discuss local issues and define the purposes of the 4-H program.

Other highlights of the two-day program will be a simulated "Game of Democracy" where 4-H members will play the role of legislators and a 50's record hop.

Mrs. Seckman points out that special emphasis will be placed on preparing the delegates and leaders to assist in coordinating 1976 Bi-Centennial county celebrations.

York 4-H Activities

Sunday, April 6

AGRISERUM — A NATURAL SOIL CONDITIONER

It's improving soils from year to year - many happy repeat customers. Almost unbelievable testimonials. Multiplies earthworms and bacteria fast for better soil texture, easier plowing, much greater water-holding capacity for drought. Read Joel I and prepare. Rich earthworm excretions replace some fertilizer or all of it. Plants get bigger roots, more minerals and protein (less to buy). Better feed efficiency. Also other very important natural soil minerals, conditioners and fertilizer, and organic dusts that do the job.

Also the well proven CONKLIN products for healthy motors. 4 more horsepower in tractors and 2 or more extra miles per gallon in cars frequently reported. Oil and kerosene burners and heavy equipment use considerable less fuel. Motors last longer without repairs with the oil additive, less friction.

I would not take on an additional product (Conklin) to destroy Agriserum's reputation if it were not good.

Order now before I get too busy with farming to deliver.

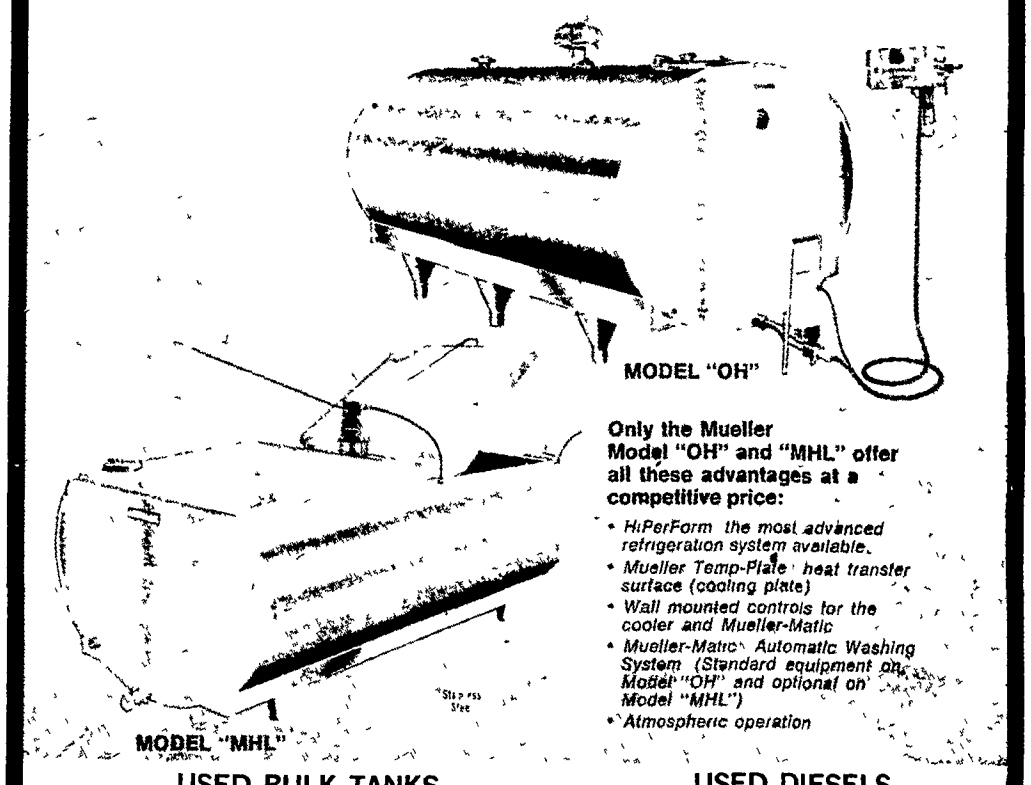
SPECIAL OF THE WEEK

500 Gal. MOJONNIER

The Mueller Models "OH" and "MHL" with HiPerForm make all other bulk milk coolers obsolete

If you are in the market for a bulk milk cooler and you don't check all the advantages of the Mueller Models "OH" and "MHL", you may be buying an obsolete cooler.



Only the Mueller Model "OH" and "MHL" offer all these advantages at a competitive price:

- *HiPerForm the most advanced refrigeration system available.*
- *Mueller Temp-Plate heat transfer surface (cooling plate)*
- *Wall mounted controls for the cooler and Mueller-Matic*
- *Mueller-Matic Automatic Washing System (Standard equipment on Model "OH" and optional on Model "MHL")*
- *Atmospheric operation*

Sutan® + and atrazine... my "go-fishin' herbicide"

Selective Herbicide

When I get my corn planted, I'm set for a little fishing. Before other farm jobs. With no cultivating or spraying a catch-up herbicide.

That's because I incorporate a tank mix combination of Sutan®+ herbicide and atrazine in the soil when I disc my corn ground for planting. Sutan+ takes care of the grass weeds. Atrazine gets the broadleaves.

Mixed in the soil, this combination works. Rain or shine. Sutan+ and atrazine are right in the soil destroying weeds as they sprout. No waiting for rain as with surface-applied herbicides. It's always dependable!

Sutan+ is designed to give excellent crop tolerance on a wide range of soil types under all variations of weather stress and application errors.

Sutan+ with atrazine has a top reputation for reliable broad-spectrum weed control in corn. No wonder I call it my "go-fishin' herbicide" combination.

Use it on your corn ground, too. Check dosage rates on the product container. Always follow label directions carefully. See your Stauffer supplier for Sutan+. Stauffer Chemical Company, Agricultural Chemical Division, Westport, Connecticut 06880.

Sutan®+ from Stauffer CHEMICALS

ANNOUNCING THE MOST REVOLUTIONARY

SEEDCORN PURCHASING PROGRAM EVER OFFERED BY A MAJOR SEED PRODUCER. **ENDS APRIL 30, 1975**

BY GOLDEN HARVEST & ENVESTO ENTERPRISES

Book your favorite GOLDEN HARVEST HYBRIDS for 1976 during April and we'll plant them in our seed production fields assuring adequate supply for popular hybrids. When seed crop is harvested this fall you will have first claim on the right GOLDEN HARVEST HYBRIDS for you.

YOU HAVE NO OBLIGATION all preferred orders are a first call on the seed available provided I am pleased with my present crop or the hybrids growing in my area and am satisfied with the new price when it is named next fall. If I **do not** want the corn I will notify my dealer cancelling my order.

BEST OF ALL you **will not** be required to put any money down when booking your order.

You will be given $5.00 per unit off next year's price. "Piece of the Crop Certificates" will be sent directly to you by Columbiana Seed Co. These certificates will be redeemable for purchases of GOLDEN HARVEST HYBRID SEED CORN for 1976 planting season.

In addition, ENVESTO will allow an additional **5 percent EXTRA EXTRA EARLY ORDER DISCOUNT** when an individual farmer's order totals 10 (ten) units or more and is received in Latrobe by April 30, 1975.

ENVESTO SUPPORTS PENNSYLVANIA TRACTOR PULLING

The Pennsylvania Tractor Pullers Association is pleased to welcome Envesto Enterprises of Latrobe, PA as the 1975 State Sponsor. Envesto Enterprises, offering a complete line of field seeds, chemicals, fertilizers, ration-balancing and soil improvement programs will feature GOLDEN HARVEST HYBRID SEED CORN and WATERMAN-LOOMIS ALFALFAS as the feature products of the 1975 PTPA Incentative-Sponsorship program. For all orders of Golden Harvest seed corn and Waterman-Loomis alfalfas booked through PTPA and its chapters, their members and friends ENVESTO will return a portion of the total sales to PTPA.

Lester Houck, State Secretary, indicates that the thousands of tractor pulling fans and friends wishing to support the "SPORT OF TRACTOR PULLING IN PENNSYLVANIA" should direct their orders to PTPA chapter members who in turn will book the order with Envesto.

Spring Means Plenty of Greenhouse Work

by
Mrs.
Charles
McSparran
Farm Feature
Writer

Mary B. Glick, potting geraniums at Glick's Plant Farms, Smoketown, Lancaster County.

Now that spring is here most gardeners are thinking about getting vegetable and flower plants and starting some perennials or herbs. Miss Mary B. Glick, 2455 Old Philadelphia Pike, has worked at Glick's Plant Farms, Smoketown, Lancaster County, all of her life. Her father, Isaac, originated the business in 1901. The plant farms, now owned by Isaac's son, Jacob, is the largest plant farm in Lancaster County and one of the largest in the state. Isaac had three glass greenhouses and several hot beds. Through people's confidence in Glicks it has grown until they have four large glass, one fiberglass and four plastic greenhouses and they sell several million plants a year. They have always sold plants retail and some wholesale. The farm on which the greenhouses are located also includes forty acres where other farm crops are grown and Jacob's sons have an airstrip for their airplane.

Mary used to work at the greenhouses full-time through the growing season but now that she has other interests she works there about two days a week. She takes care of the geraniums as she always did, except they are bought in small pots now, wheras she used to start them. She pots them, spaces them and does the watering. They have 10,000 geraniums in pots, including some in four-pack containers. They have mostly cultured stock which is heartier than regular geraniums. They have five varieties of red, two of pink and one white one. Mary says "Most people over-water geraniums. In most cases they should be watered about once a week in the home. They do very well in tin cans, plastic pots or painted clay pots. The paint keeps them from losing moisture through the clay. They won't become wilted if you soak them well." Miss Glick also takes cuttings from double begonias.

Miss Glick has always had great interest in growing herbs and has a vast knowledge in the uses of each one. She has grown them for the Plant Farms for many years. Although she has not started them for the Plant Farms for three or four years they will have herbs to sell there again this year as usual. There are many, many kinds of herbs, some hardy, some annuals and some must be kept indoors in winter. There are many books available on growing herbs and their uses. With the popularity of antiques and interest in old things people have renewed their interest in herbs. Organic gardening has become more popular and folks are anxious to grow herbs which will repel insects rather than resort to expensive sprays and dusts that sometimes could drift and kill some plants or some that would leave a harmful residue.

Miss Glick has been raising the following herbs, most of which are edible, are used for medicinal purposes, are decorative or are insect-repellents: Parsley, Italian Parsley, Garlic, Comfrey, Basil, Borage, Marjoram, Tansy, Chervil, Chives, Bergamot, Sage, various species of Thyme including Creeping Thyme, Horehound, Rosemary, Lemon Verbena, Dill, Savory, Lavender, Oregano, Lovage, Peppermint, Rue, Spearmint, Applemint, Pineapple Mint, Lemon Balm, Santolina, Hyssop, Yarrow and Wormwood.

Mary has three brothers and two sisters and all helped with the greenhouse work. Her brothers did the farm work at their father's farm near Smoketown as he was a cripple. Isaac also had a farm near Quarryville, one near Lebanon and two at Honey Brook. He had a large chick hatchery in Smoketown, and originated the seed business in Smoketown which is now owned by P. L. Rohrer & Brother. His oldest son, Rev. Aaron Glick, is now pastor of Pequea Amish Mennonite Church. Malinda married Aaron Riehl who is a part time employee at the Plant Farms. Daniel, a retired farmer, is secretary at the Locust Grove Mennonite School. Jacob owns the Plant Farms and is in charge of wholesaling. Dorothy is a registered nurse in a Doctor's office at Harleysville. She married Roland Yoder who teaches art and a pre-med course at Christopher Dock School at Harleysville.

The third generation of Glicks now work at the Plant Farms. Jacob's oldest son, Norman, is in charge of retailing and John sows the seed. Glicks employ two men all the time and one part-time man. They hire six girls this time of year to transplant plants and employ more workers in the summer. They not only grow all kinds of annual vegetable and flower plants but also have Spanish and Bermuda onions, sweet potatoes, asparagus, raspberries, grape vines, strawberry plants, peonies, astilbe potted plants, delpheniums, columbines, potted roses and other perennials in pots. They grade the flower annuals according to size and plant them in flats and peet pots.

Mary has a vegetable garden in her back yard. She is an organic gardener. She still grows herbs for her own use. She grows beets, carrots, string beans, plants of the cabbage family, lima beans, okra, soybeans, lettuce, tomatoes, peppers, celery and sweet potatoes. She freezes a lot of vegetables and cans peaches and tomato juice. Some people have trouble keeping onions and sweet potatoes. Miss Glick advocates taking them up when the ground is dry. She says sweet potatoes should be dug in late August and should lay in the sun a half day.

Miss Glick has entertained tourists since the early sixties. She says "You make some very wonderful friends and they come back again." She has three guest rooms. One has a private bath.

Miss Glick is a member of South Christian Street Mennonite Church, Lancaster, located at the corner of S. Christian and Locust Streets. She started going there around 1940 and taught in their Daily Vacation Bible School. She taught a girls Sunday School Class for ages 12 and 13 for 20 years. The motto for her class was "What you are when you arrive is God's gift to you. What you make of yourself is your gift to God." She belongs to the sewing circle which meets once a month, usually in the evening. Sometimes they have all-day meetings with a covered dish luncheon when they knot quilts. They make five or more quilts in an evening, some crib size and some full bed size. Her ladies Bible class meets once a month. She also attends the Sunday evening services the second and fourth Sunday of the month. They are preceded by a children's service. She does church visitation work in homes in the community or where there is a need, reading the Bible and giving them spiritual encouragement.

She says "My first work is the Lord's work. As an older citizen I find life interesting and challenging, not always easy but can be satisfying. God has given us his word, the Bible, so we can become acquainted with the eternal Son who was born into the human family, paid for our sins with his blood on the cross, so we can be born into the family of God. We are told in the 24th chapter of Matthew, "As it was in the days of Noah, so shall it be at the coming of the Son of Man. They ate and they drank, and were married and were given in marriage, but they knew it not until the great diluge came and all outside of God's place of safety perished." It also tells us in Genesis 6:11 "The earth was filled with violence." What do we have today? The same condition. In Luke 21:36 we are commanded to watch and pray, that we may be counted worthy to escape all these things which may come upon the earth."

Mary loves poetry and used to collect it. She enjoys

[Continued on Page 44]

Mary Glick painted this picture of her parents' farmhouse built in the seventeen hundreds. William Penn laid out this farm located on Hobson Road, near Smoketown, in E. Lampeter Township.

ASSOCIATE EDITOR

Daisey's Cure

Almost a year ago, one of our former editors printed an old recipe called Daisey's Cure for Arthritis Since that time we have had numerous requests to reprint the recipe It took awhile but here it is: Please remember that we are not recommending this as a substitute for any medicine or treatment but have reprinted it for the enjoyment of some of our readers.

Recipe

Cut one grapefruit, one orange and one lemon in quarters and place in a covered container. Add one tablespoon Epsom Salts and one tablespoon cream of tartar. Pour on one quart of boiling water and let stand for 12 hours at room temperature then strain. Place liquid in refrigerator or cold place for storage. There were no specific dosage amounts included with the original recipe.

Natural Cereal

Many farm wives were making "natural cereal" long before the cereal companies even thought of the idea. We have received some recipes for such, each with their own variation Most of the recipes, however, call for combining oatmeal, wheat germ, cocoanut, chopped nuts with brown sugar, vanilla and white syrup and then baking the mixture in a low temperature oven If you're tired of those high priced cereals why not make a batch of your own!

We invite our readers to send in contributions, replies and suggestions to Country Corner. Please sign your letters although we will withhold names upon request Have a good week!

(Continued from Page 42)

handing out copies of poetry to her friends. She seems to have inherited an ability to write from her father who wrote poetry. She enjoys painting and has proved her ability by doing at least a dozen oil paintings. She took some lessons from Mrs. Winne in Reading. Another hobby was knitting. She knit a coat, sweaters, caps and gloves.

She used to do a lot of entertaining. One of her long suits has been cooking. She cooked for a family in Reading for two winters and for an ex-millionaire in Exton one winter. She tries recipes then adapts them to her own liking:

Chewy Brownies

¾ cup sifted flour
one-third cup butter or other shortening
1½ squares unsweetened chocolate OR 3 scant tablespoons cocoa OR part carob powder
¾ cup sugar
2 eggs, well beaten
1 teaspoon vanilla
¼ cup chopped walnuts

Sift flour once, measure, add baking powder, and sift again. Add butter to chocolate and blend. Combine sugar and eggs; add chocolate mixture, beating thoroughly, then flour, vanilla, and nuts. Bake in greased pan, 8 x 8 x 2 inches, in moderate oven (350 degrees) 35 minutes. Cut into squares.

Cinnamon Flop

1 nine inch layer pan
¾ cup granulated sugar, creamed with:
2 tablespoons of butter or margarine
2 cups sifted western flour
2 teaspoons baking powder

Sift flour and baking powder together. Mix all with a cup of milk (less if it seems too much for right consistency.)
TOPPING:

Sprinkle very lightly with flour. Cover well with brown sugar and dots of butter and cinnamon.

Bake at 400 degrees for 25 to 30 minutes.

Farm Women Society 7 meeting at 2:00 p.m.
Farm Women Society 29 meeting at 7:30 p.m. for a birthday party at the Pleasant View Rest Home.
Farm Women Society 19 luncheon entertaining Society 5 at the Lititz Church of the Brethren at noon.

Vanilla Pie

Bottom Part:
½ cup brown sugar
½ cup dark molasses
1 tablespoon flour
1 egg
1 cup water
1 teaspoon vanilla
TOP PART:
1 cup flour
½ cup brown sugar
¼ cup shortening
½ teaspoon soda
½ teaspoon baking powder
1 9 inch pastry crust

Combine ingredients for lower part and cook until thickened. Pour into unbaked pie shell. Top with crumbs made by combining sugar, flour, soda, baking powder and melted shortening.

Bake at 375 degrees for 40-45 minutes.
Makes one nine inch pie.

NOTICE
To The Citizens of Conestoga Valley School District

The Conestoga Valley Concerned Citizens Committee is making an effort to elect school board candidates who care about YOUR tax dollar! Who care what YOU think! If you are concerned about the levying of a possible 15 to 20 mill property tax increase on your property by the school board for such non-educational items as a $500,000 to $600,000 swimming pool complex, you can do something about it

To voice your opposition, you can vote for candidates who oppose this type of spending in the May 20, 1975 Primary Election

But you must be registered to vote before April 21, 1975. You can register on April 12, 1975 at the Leola War Memorial Building from 12 noon to 6.00 p m Eastern Daylight Time or at the Lancaster County Court House every day.

If you need help, or a ride, please contact us Write

LADIES, HAVE YOU HEARD?

By Doris Thomas, Extension Home Economist

Ceramic Countertop Savers

Even in the cleanest of kitchens, countertops can wind up stained with grape juice, or marked by scorches or ugly scratches. They take a beating in most homes.

But the new ceramic countertop savers can handle the use and abuse of everyday kitchen chores. Countertop savers have a strong, durable surface that is smooth, hard and non-porous. Countertop savers vary in size and come in portable and built-in models.

When using a countertop saver, stains become a problem of the past . . . mustard, berry and meat juice wipe off easily with household cleanser.

The ceramic slab provides a handy, durable, scratch-resistant surface for slicing, shopping and carving. And its non-absorbency allows you to chop onions one minute and roll piecrust the next. You needn't worry about any carry-over onion taste, if you wipe off the surface between tasks.

You can cool sizzling pans and steaming casseroles on the countertop saver. Its surface won't scratch or blister.

It can prove a time-saver too because you won't need to haul out the chopping board, cooling racks and pastry cloths for different tasks.

These ceramic surfaces can take abuse but don't use meat cleavers and electric knives on them. The blades may become dulled and the ceramic surface scratched.

Inexpensive Household Cleaners

The bright, bold words "new" and "improved" are intended to have a magic effect on consumers. But products labeled "new" may not be newer or better than other similar items on the market. And "improved" should make you wonder what was wrong with the earlier, unimproved version.

Cleaning products are especially subject to this kind of advertising. If you are confused about which products are newest and most improved, you might do well to stick to the oldest, most reliable standbys.

Three examples of common, but effective, cleaners are baking soda, household ammonia and vinegar. These products, found n almost every home, can provide effective cleaning power for much less money than commercial cleaners cost.

You can use baking soda to clean wall tile, porcelain enamel and glass and to remove coffee stains from china and plastic dishes. It's useful in removing odors and cleaning the inside of the refrigerator. But do not use baking soda on aluminum items because it will darken them.

An ammonia solution is good for cleaning painted walls, washing windows and cleaning ovens. In fact, it's much safer than commercial oven cleaners, although it works more slowly. One-half cup of ammonia, in a container, placed in an oven overnight will loosen grime and make cleaning easier the next day.

If you have ever sniffed the fumes of ammonia you know that it is strong. Used incorrectly, it can burn the skin or eyes. If swallowed, it should be treated as poison. Store ammonia in its original container out of the reach of children. When using, carefully read and follow the directions on the label.

Vinegar is a milk cleaner with special cleaning properties. It is a weak acid and serves to neutralize alkaline materials. You can use it to remove hard water deposits from glassware, and rust stains from sinks. It will brighten darkened aluminum pots and pans. And it's a good window cleaner. Vinegar in the laundry can reduce the need for commercial softeners. Add one-quarter to one-third cup of white vinegar to the final rinse to soften the wash and help remove detergent or soap residue.

BIGGER INCOME
Friendly First Certificates

With as little as $500, you can invest in Friendly First's Certificates of Deposit the big money makers! With a larger investment, you can arrange interest payments for a planned income program.

- Highest interest rates allowed by law.
- Interest rate guaranteed for life of certificate.
- Interest compounded continuously for biggest possible annual yield.
- Certificates insured up to $40,000 by the Federal Deposit Insurance Corporation.

Look at this chart! It shows the wide choice of certificates with options to suit your needs:

Rate%	Interest Payments	Minimum Deposit	Maturity	Annual Yield*	Rate%	Interest Payments	Minimum Deposit	Maturity	Annual Yield*

Recipe Exchange . . .

Home on the Range

Thanks to all our readers who sent in recipes for Red Velvet Cakes. We received so many of the recipes that we will be featuring them in weeks to come - so be watching for the variation you would like to try.

How about a dish that has real Southern flavor? A reader from Florida sent us a recipe for Shrimp Pileau. It's a little different for this area but worth trying for a new flavor.

Shrimp Pileau

2 pounds cleaned, headed shrimp
¼ pound bacon
2 cups rice
2 small cans of tomatoes
4 medium size onions
1 small green sweet pepper
1 small datal pepper

Remove veins and wash shrimp, cut into two (medium size shrimp give the best flavor). Cut bacon and onions in small pieces, fry bacon slowly - take out half of bacon pieces and cook tomatoes and onions in bacon fat. Add pepper, cut fine and cook until a nice brown, add raw shrimp and cook a few minutes. Add thyme and salt. Add enough water to tomatoes and onions equal to 4 cups liquid. Put all in a heavy pot when it boils, add two cups rice and cook slowly until well done.

Mrs. Lucy Mickler
Jacksonville Beach, Florida

xxx

Ham Loaf

1½ pounds ground ham
1 pound ground pork
2 eggs
1 cup cracker meal
Two-thirds cup milk
¼ teaspoon pepper

Mix together ham, pork, eggs, crumbs, milk and pepper. Shape into loaf and place in baking pan. Bake at 300 degrees for 2 hours basting occasionally with glaze. Makes 8-10 servings.

Glaze

Stir together ¾ cup dark corn syrup, one-third cup vinegar and 2 teaspoons dry mustard in a small sauce pan. Stir occasionally, bring to a boil and boil for two minutes.

Mrs. J. Horst
Oxford, Pa.

xxx

Rhubarb Custard Pie

Pour 1 quart of boiling water over 1 quart of diced rhubarb. Let stand for 10 minutes then drain. Add 2 cups granulated sugar; 3 heaping tablespoons flour; 2 eggs and ½ cup cold water. Pour into unbaked pie shells and top with crumbs made of ½ cup flour, ½ cup sugar and ¼ cup lard. Makes 2-8 inch pies.

Katie Fisher
Gordonville

xxx

Barbequed Chicken

1 cup vinegar
1 cup oil
1 cup tomato juice
2 tablespoons salt
2 tablespoons worchestershire sauce
add enough water to make 1 quart

Place chicken parts in a pan and pour sauce over chicken so sauce is ½ to ¾ inch deep. Cover and bake 1½ to 2 hours uncovering the last ¾ hours in 350 degree oven.

Left over sauce can be kept of used with other meat such as pork chops.

C. Shirk
Columbia, Pa.

xxx

Vanilla Cream Cake

Beat 4 egg yolks and add 10 tablespoons water beating well. Add ¾ cup sugar slowly and beat again. Sift 2 cups flour and 3 teaspoons baking powder and add beaten egg whites beaten with 1 teaspoon salt.

Fold egg whites into batter, pour into shallow pans lined with wax paper. Bake at 325 degrees for 10 minutes then put crumbs on one pan made of ¾ cup brown sugar, ½ cup flour and 2 tablespoons butter.

Filling

Scald three cups of milk and mix together: 1 heaping tablespoon flour, 1 heaping tablespoon corn starch, 2 eggs, ¾ cup sugar, 1 teaspoon vanilla and a few drops of yellow coloring.

Cook until smooth. Add 1 tablespoon lemon juice, 1 tablespoon butter and ⅛ teaspoon salt. Chill and spread between layers. Sprinkle with powdered sugar.

Mrs. E. L. Stoltzfus
Bird-in-Hand, Pa.

xxx

Red Velvet Cake

Sift together:
2½ cups cake flour
2 cups sugar
6 tablespoons cocoa
2 teaspoons soda

Combine:
4 well-beaten eggs
2 cups sour cream
1 teaspoon vanilla

Stir egg mixture into dry ingredients. Beat three minutes. Pour into greased, lightly floured 9 x 13 inch cake pan. Bake at 350 degrees in moderate oven for 50 minutes.

Mrs. Katie Zook
Gap, Pa.

xxx

Sunday Spice Cake

Measure into a mixing bowl:
2½ cups sifted cake flour
1¼ cups sugar
1 teaspoon salt
1 teaspoon cinnamon
Two-third cup shortening
½ teaspoon cloves
½ teaspoon nutmeg
½ teaspoon allspice
One-third cup molasses
Two-third cup milk

Beat vigorously by hand for two minutes and stir in:
2½ teaspoons double acting baking powder
½ teaspoon soda

Add: 3 eggs and ½ cup milk. Mix thoroughly and bake for 35 minutes in a 375 degree oven.

Lizzie S. Zook
Gap, Pa.

xxx

Miracle Icing

1½ cups sugar
One-third cup water

Boil together for three minutes and beat 2 egg whites with ¼ teaspoon cream of tarter. Beat together with sugar mixture for five minutes and add 1 teaspoon vanilla.

Pile high on cake in swirls, it will not become dry or have a crust.

Mrs. E. L. Stoltzfus
Bird-in-Hand, Pa.

Berks Co. Society 2

Farm Women Group 2 of Bethel, Berks County held their March meeting at the home of Mrs. Woodrow Weber. Giving two ways of getting along better with people was the roll call question answered by 23 members. The hostess read scripture, followed by Lords Prayer and flag salute. The group sang a song led by song leader, Mrs. Clayton Schmehl. Mrs. Wilbur Hershey, president presided for the business; Mrs. Quentin Gettel read the minutes, and Mrs. Clarence Klahr gave the treasurer's report.

Sunshine Committee reported sending get well cards to Mrs. Edna Buck and Nevin Keeney. Berks Helm report by Mrs. Helen Ebling reminded the group of Bingo Night April 3, 7:00 p.m. The group will furnish prizes and two cakes. Volunteer tea is April 23 1 to 3 p.m. and Society 2 is responsible for four pounds of cookies. Ways and Means Committee has a candle sale at present and a bake sale set for April 19 at Dutchway. Each member is asked to contribute two items of baked goods.

Spring Rally reservations for the group will be with Mrs. Clarence Klahr by April 7; also reservations for Men's night will be with Mrs. Daniel Harnish by April 7. Mrs. Earl Ebling reported on the County Board meeting. Mrs. Daniel Harnish reported the following dates: April 12, Men's Night; April 22, meeting night at Altalaha Church Rehrersburg; April 27, Bus trip to Harrisburg Museum; May 27, Mother and Daughter Banquet, Trinity U.C.C. Church Rehrersburg.

Mr. Kenneth Yiengst showed slides of a trip to Montana. The hostess served refreshments. Next meeting at Altalaha Church, Program Met Ed, April 22.

Junior Cooking Edition

Home on the Range

This week we are featuring a variety of dessert recipes sent in by our Junior Cooks. We thank all of our readers both Junior and Adult for sending in so many recipes that we have requested.

Frozen Pops

1-3 ounce package of gelatin any flavor
1 envelope kool-aid instant
1 cup sugar
2 cups boiling water
2 cups cold water

Dissolve jello, instant soft drink mix and sugar in boiling water. Add cold water. Pour into ice cube trays, small paper cups or frozen pop molds. Insert wooden sticks diagonally in each ice cube section or at an angel in molds or cups.

If desired pops may be partially frozen before handles are inserted. Freeze until firm 2-3 hours. Makes 20-24 pops.

Easter Earl

xxx

Mother's Chocolate Cake

2 cups brown sugar
3 eggs
¾ cup vegetable oil
¾ cup hot coffee
mix cocoa and coffee together
1 teaspoon soda
1 teaspoon baking powder
1 teaspoon vanilla
1 teaspoon salt
¾ cup milk
¼ cup vinegar mixed together
2¼ cups flour

Combine ingredients and bake at 350 degrees for 35-40 minutes.

Fanny Miller
age 13
Strasburg

xxx

Burger Pizza

1 cup packaged bisquit mix
pure vegetable oil
½ pound ground beef
salt and pepper
½ teaspoon oregano or basil
1-8 ounce can of tomato sauce
1 tablespoon chopped parsley
¼ pound swiss cheese cut in 1 inch strips

Prepare dough according to package directions. Divide dough in half. Roll each piece to fit bottom and sides of 8 inch pie pan. Brush with oil. Put half of the remaining ingredients on each pie in the following order. Crumble beef evenly over dough sprinkle with salt, pepper and crumbled oregano or basil. Cover with tomato sauce and parsley. Arrange cheese strips on top like spokes of wheel. Bake in a hot oven 400 degrees for 20 minutes or until brown and cheese is melted.

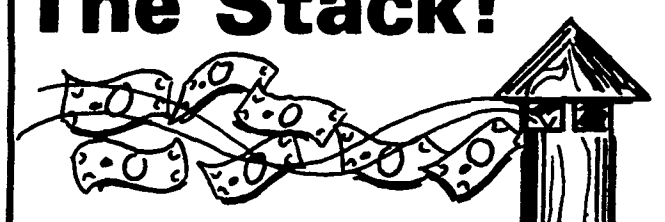
All Home Oil Furnaces Waste 30% Fuel Up The Stack!



Outrageous, yet it's true A recent study on home heating describes how virtually all oil-fired furnaces allow stack draft to rob precious chamber heat between firing cycles This translates into decreased thermal efficiency that robs up to 30-percent and more in fuel dollars Further, this should not have to happen!

There's an instant remedy! Call us for our simple FURNACE FUEL SAVER. It's a quick stack attachment that will begin considerable savings in fuel costs for you today!

Lebanon Co. 4-H Youth

Amy Schaffer, Lebanon, R4, is one of five outstanding Pennsylvania 4-H members selected to take part in the National 4-H Conference in Washington, D.C., April 19-24.

The conference, with headquarters at the National 4-H Center, is designed to explore ways to improve 4-H work and to interpret the youth program to legislators and other public officials through personal contact.

"Amy was named to attend the event on the basis of her 4-H records and participation in county and state activities," said Dr. Marcia C. Beppler, 4-H-Youth specialist at The Pennsylvania State University.

In Washington, the five delegates will meet with 4-H members from other states, visit points of interest in the District of Columbia area, have conferences with lawmakers, and discuss major issues facing 4-H in the future, Dr. Beppler points out.

Several hundred 4-H members from all states, Puerto Rico, and the District of Columbia will take part in the activities.

The daughter of Mr. and Mrs. W. Harry Schaffer, Amy is a freshman at Grove City College. She has been a 4-H member for nine years.

She served her local 4-H Club as president, vice president, secretary, news reporter, treasurer, and game leader.

Amy participated in the Regional 4-H Teen Leaders Retreat, State 4-H Achievement Festival, Pennsylvania 4-H Leadership Congress, National 4-H Club Congress, and Citizenship Short Course.

She was named a state 4-H horticulture contest winner in 1973 and a state 4-H demonstration contest winner in 1971-72.

The other 4-H members attending the national conference are Gary Finlan, of Bradford; Ronald Harman, of Tionesta, R1; Francis Steiner, Jr., of Beaver Falls R1; and Deby Everett, of Bloomsburg, R5.

Money Management

Printed as a public service by the Lancaster Farming and the Pennsylvania Institute of Certified Public Accountants.

Is it more economical to rent or buy a piece of equipment? Take the purchase price, add to it other costs such as maintenance and interest sacrificed, then divide by the number of days it will be used over its lifetime. Compare the result with the daily rental charge.

Does PP&L really need those rate increases?

In these economically troubled times, it's hard to worry about five or ten years from now. So when PP&L says it needs increases in electric service rates, it's perfectly understandable that many people are tempted to say: "No! Living costs have gone up too much already."

PP&L has asked the Pennsylvania Public Utility Commission for increases averaging four per cent starting in June and 11 per cent in early 1976. Both increases would be subject to close PUC scrutiny and public hearings.

Does PP&L really need these increases?

Absolutely yes. Because PP&L is required by law to provide the electric service the public wants—not only today but tomorrow as well.

Briefly here's the picture as PP&L sees it:

- We need more electric energy to keep the country going—to provide jobs and decent living standards for a still-growing population.
- Increasing the energy supply—building a power plant, for instance—takes five to ten years. Further cutbacks now can have very serious consequences in the future.
- While energy conservation and our faltering economy have slowed down projected growth of total energy requirements, demand for *electrical* energy is expected to grow considerably. That's because we're running out of natural gas and there's a great need to get unhooked from dependence on imported oil—to stop playing "Arab roulette."
- It's going to take a huge amount of money for PP&L to build power plants and other facilities to meet these increased needs—and about three-quarters of that money will have to come from people buying PP&L's stocks and bonds.
- People aren't going to buy those stocks and bonds unless they feel that their investment is being made in a company that is financially healthy—that is, one whose customers pay enough to cover the rising cost of providing service, including the cost of money.

Maybe this all looks like a vicious cycle, and, in some respects, it is. But before taking the short-term view and saying "stop this thing, I want to get off," consider that adequate rate increases now will mean lower costs for electricity in the long run because:

- Our customers are badly served if PP&L, for lack of adequate rate relief, winds up like the bankrupt railroads, whose inability to charge enough to cover all of their costs has shifted additional burdens onto taxpayers and placed in jeopardy tens of thousands of jobs.
- If PP&L can keep going in a financially healthy condition, it means we can continue to build more efficient facilities which, in the long haul, will cost less to maintain and operate than old facilities. For instance, a nuclear plant, while much more expensive to build, costs a lot less to operate than other kinds of power plants and, in the long run, can save customers a lot of money.
- We're going to have to raise almost $900 million in the next three years to build needed electric facilities. In addition, another $125 million must be raised to pay long-term debt now coming due that must be replaced at much higher—triple, in fact—interest rates. A good part of this money will have to come from mortgage loans. That's why it's vital for us to maintain our present credit rating so we can borrow this replacement money at the lowest possible rates.

A few questions a lot of people will be asking us:

"You just announced that your earnings have gone up again. Wouldn't these rate hikes result in excessive 'profits' for PP&L?"

No. First of all, "profits" for PP&L are limited by law and regulation. For us they are simply one of the costs of doing business—in effect, paying people for the use of money. PP&L needs higher earnings because people have invested more money in PP&L so we can build facilities to serve customers. What cash is left over after we pay common stockholders for the use of their money is plowed back into the business to help pay for the new facilities. So, there isn't anything left over to divide up as "profit." The common stockholder, by the way, hasn't been very well paid in recent years. Our dividends haven't been increased nearly enough to keep pace with the cost of living and our common shares are now selling for less than the money our shareowners have actually put up.

"What is PP&L doing to cut costs and hold down the need for higher rates?"

A lot of things. We've cut back construction projects as much as we can without jeopardizing service to our customers. Because of this and cutbacks in some programs not vital to operations, we've made some substantial reductions in our payroll. We're doing the best we can to hold down costs of the materials we must buy and are engaging an independent consulting firm to take a top-to-bottom look at the Company to see if there are more ways to improve efficiency.

"What about the Fuel Adjustment?"

Our request for increased rates does not affect the fuel adjustment up or down. That's strictly tied to the cost of coal and oil we must buy to run our power plants. The adjustment rose sharply following big increases in the cost of bituminous coal after the oil embargo but it's leveling off now. The PUC has announced it plans to investigate this controversial charge, and we think that's a good thing. Incidentally, because of PP&L's zero-profit coal mines and Company-owned fleet coal trains the fuel adjustment paid by our customers in 1974 was lower by at least $20 million.

"How much money would these increases bring in and what would you do with the money?"

The first part would produce $21.3 million in new annual revenues and the second part $58.2 million. Taxes would eat up a significant part of this. For starters, $3.6 million would go to the State Gross Receipts Tax which only utilities pay. Federal and state income taxes would take millions more. PP&L would use what's left after taxes to pay for increased costs of providing service, mainly manpower, materials and money.

"Will everybody be affected the same by these proposed increases?"

No. Some 200,000 customers who use relatively little electricity (285 kilowatt hours a month or less) would get increases of a penny a day or less this year and 3 cents or less in 1976. And of that number, about 120,000 families who use 200 kilowatt hours a month or less will get no increase at all. The average increase for families without electric heat who use more than 200 kwh a month would be 2.8 cents a day starting in June and about 10 cents a day late this year or early next year. Some 60 per cent of the new revenues brought in by the increases would come from industrial and commercial customers.

"What about the electric heating customer?"

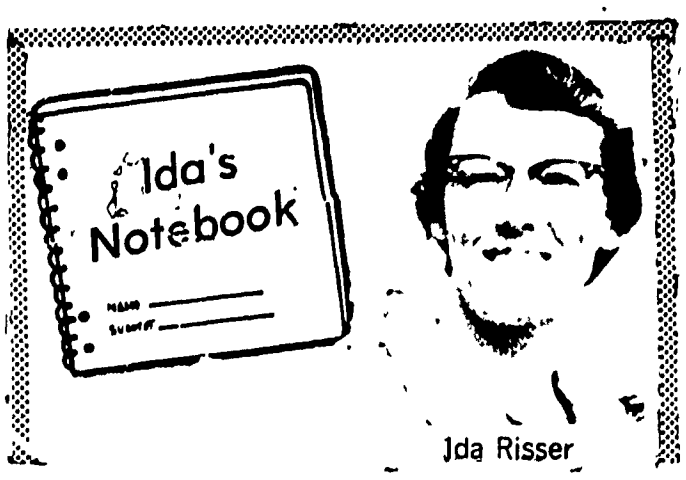
The average residential electric heating customer would receive increases of about 8.2¢ a day this year and another 22.8¢ a day next year. These proposed higher rates, along with the fuel adjustment and earlier increases in charges to electric heating customers, will mean price hikes of a little more than the cost of home heating oil and less than the cost of anthracite coal.

"Where do PP&L customers stand right now in what they're paying for electricity?"

PP&L's average residential customer now is paying the lowest price for electricity in Pennsylvania, including the fuel adjustment. If you were able to "price-shop" for electricity in the state, even with the proposed increases, the great majority of residential customers still would find PP&L the best buy.

In line with PUC regulations, we've mailed notices to all our customers providing basic information about the proposed rate increases. In this ad, we've made an effort to explain some of the reasons and issues involved. This ad, in daily and weekly newspapers throughout our service area, cost less than if, instead of a postcard, we had sent letters of explanation to all 900,000 customers.

PP&L



Today many families are separated by great distances. Some travel for pleasure and others find jobs in distant cities. Apparently a sense of adventure has always pushed young people West.

Almost 75 years ago, a relative of ours wrote of his visit to Yosemite National Park long before it was developed fully. He told of climbing a four mile trail in order to look over a valley 3200 feet below which was enclosed by high cliffs. Also described is a 38 mile walk through snow in December to Mariposa Grove to see the great trees–they saw 50 deer too. The evening was spent around a big fireplace where stories were told by a trapper, a park ranger and two stage coach drivers. A Chinese cook made their meals and then they dried their stockings and shoes in preparation for the return hike the next day.

And I thought the pioneer lived 200 years ago!

xxx

Last Saturday when I was cleaning house in anticipation of having several couples for Sunday supper, I discovered that a 19 inch piece of molding from our grandfather clock was missing. After checking with each member of the family to see if they had found it and getting negative replies, I really put my "thinking cap" on and came up with a possible answer.

Several phone calls to Ephrata and Manheim confirmed my suspicion, that when we had our wall to wall carpet layed on Friday, the men gathered up their plastic covering and pulled the piece accidently off the clock. It was found in their truck and returned and securely glued in place.

xxx

It takes thousands of nuts to put an automobile together only one to scatter it all over the road.

Society 24

The Society of Farm Women 24 met at the home of Mrs. Jacob Garber, New Holland, March 26. Twenty five members responded to roll call, which was "5 cents for each written traffic violation in your lifetime."

Trooper Ed Roland presented a film and pamphlet on burglar proofing your home.

The business meeting was conducted by the president Mrs. Jack Golston, with the following business enacted upon. Twenty tickets will be purchased from the Lancaster auxiliary to the Lancaster General Hospital for the tour of Fordney House. Members wishing to purchase these can do so at the next meeting. A donation of $20.00 will be sent to Easter Seals Society.

Society 24 pledges its support to the Farm and Home Center for a piano for the 1975 county project.

Rummage Sale April 8, 1975 from 8 a.m. to 3 p.m. at the Bareville Fire Hall.

Several members reported that the visits to the Fred Nagle Home, with birthday cakes for the residents, has been a rewarding undertaking.

Consultant, National Dairy Council

Questions and Answers

Here are some questions often asked about nutrition. And answers which I hope will help.

Q. What is nutrient density? I hear the expression used but I don't understand its meaning.

A. Nutrient density is a term used to describe the degree to which an individual food offers important nutrients in relation to the calories the food contains. The approach here is that all of us should only consume as many calories as we expend each day. otherwise we will be overweight. So this means we must live on a caloric budget. And this, in turn, means we must first eat foods that give us a lot of nutrients for the calories they "cost" us. In other words, we should first eat foods that are "dense" or "rich" in nutrients like protein, vitamins and minerals. Milk and meat are good examples of foods that provide important quantities of nutrients along with calories.

Q. What do nutritionists mean when they talk about the "satiety value" of a food?

A. This refers to foods that "stick to your ribs," foods that have staying power. Some foods take longer than others to digest and thus satisfy us longer. It is longer before we get hungry again. These foods are regarded as having "satiety value." Foods that have the most fat in them have the most satiety value because fat remains in the stomach longer than protein or carbohydrate. Protein is next. Carbohydrates digest the quickest. This is why they are knows as quick energy foods and, in a sensible diet, are figured as energy foods.

Q. What portion of the day's calories should one eat at a given meal?

A. This is a question that certainly is best resolved by individuals in their own way. There is no general agreement on an answer. But some observations can be made. Many overweight people eat little or nothing during the day, then wolf down a big meal in the evening, perhaps eating throughout the evening, with snacks and all. Some people have recommended six meals a day. Others say the evening meal, especially, should be light, not high-fat, if it is to be followed by just sitting around and then sleeping. But there is a lot of agreement that three or four meals a day, with a reasonable distribution of calories, protein and other nutrients at each meal, are probably a good idea.

Q. What does the term "balanced diet" mean?

A. Simply that one's meals contain recommended balance of the various nutrients we need. The nutrients interact and should be consumed together. This is the basis for recommending the four-food-group approach, so you will consume a wide variety of foods.

Executive Board Meets

The Executive Board of the Lancaster County Society of Farm Women met Tuesday, April 1 at the home of Mrs. Jesse Balmer, Lititz R4, with Mrs. Carl Johnson, president, presiding.

1016 members voted on the County Project for 1975 and the final decision was to support the Farm & Home Center with special emphasis on a piano for the downstairs meeting room.

Mrs. Robert Gregory was selected as delegate to Pennsylvania State University on May 29 to represent the Farm Women of Lancaster County.

Central Manor Campmeeting Grounds was chosen as the cite for the County Picnic to be held August 6 at 12 noon with all Lancaster County members participating in a covered dish event.

June 1 is the deadline to all pageant entrants for the Lancaster County Dairy Queen. The following qualifications are required to enter: Pennsylvania resident, completion of Junior year in high school, under 21 years of age, single and either parents must be active in farming or the participant have a 4-H or FFA cow project.

Deadline for applications for Farm Women Scholarships is May 31, 1975.

Announcement was made of the Antique Show to be held at the Farm & Home Center May 9, 10, 11. Farm Women will serve as refreshment hostesses at the Reception Preview in the evening of May 8.

Next Board Meeting will be held June 3 at the Manor Brethren in Christ Church, Central Manor.

Agriculture Almanac Available

One success tip for new gardeners is to buy good seed and follow the directions on the package, says Baer's Agricultural Almanac, now in its 150th year.

Another is to "think small", and to know how much various seeds will yield, to prevent an unmanageable surplus, the Almanac says.

The Almanac was founded a century and a half ago in Lancaster, Pa., by John Baer, an early printer who developed a faithful following of farmers and gardeners.

Many readers will not plant without a copy.

The Almanac advises new gardeners to plan on spending a certain amount of each day on their plots. It also speaks for regular cultivation, suggesting, "Don't wait for weekends to do your weeding".

It has tables showing approximate planting time for various parts of the country, with related crop data.

Baer's Agricultural Almanac is a perennial favorite that blooms annually no matter what the weather may be. It predicted a moderate winter for 1974-75, and on that did fairly well.

Among the anniversaries of Revolutionary War events, 200 years ago, it includes: April 18, 1775, Paul Revere's ride; April 19, Battles of Lexington and Concord, the opening hostilities; May 10-12, capture of Fort Ticonderoga by Ethan Allen and the Green Mountain Boys; May 10, opening of Second Continental Congress; June 15, appointment of George Washington as commander-in-chief; June 17, Battle of Bunker Hill.

The Almanac, oldest in Pennsylvania in continuous existence and one of the best known in the nation, also contains information on phases of the moon, a fishing calendar, recipes, poetry and humor.

It retails for 75 cents. It can be obtained postpaid for $1.05 from Baer's, Box 328, Lancaster, Pa. 17604.

Agway Council Meets

Committee chairmen representing Agway stores and representatives in Pennsylvania, New Jersey, Delaware, Maryland and Eastern Ohio of the 12-state area served by the agricultural cooperative gathered at Camp Hill this week for the annual meeting of the Agway Council.

The council is an advisory body to the Agway board of directors and also serves as the key communications link between the board and management of the cooperative's 113,000 members. It is composed of committee chairmen from approximately 380 Agway stores and representatives. Farmer-members of each store elect a committee to guide its operations. The committee chooses a chairman who then also joins the council.

During their two-day session, councilmen heard reports from George Steele, chairman of the board of directors; Ronald N. Goddard, general manager; and several other management representatives who will discuss activities of the past year and outline future plans and programs.

A highlight of the evening session on Wednesday was a panel discussion on upgrading communications within Agway including the role that committeemen play.

The meeting at Camp Hill was held in the Penn Harris Motor Inn. The other two regional sessions are scheduled this month for Syracuse, N.Y. for the northern region; and at Chicopee, Mass. for the eastern region.

Lockey To Address Beekeepers

Dr. Stephen D. Lockey, Sr., a specialist in allergies will talk to the Lancaster County Beekeepers on hymenopterous venon allergies at the first seasonal meeting Thursday, April 10 at 8:00 p.m. at the Lancaster Farm and Home Center.

Dr. Lockey is world renouned for his work in all types of allergies. He recently addressed an allergy symposium in Paris, France. Dr. Lockey has an office on West End Avenue in Lancaster.

The discussion and talk will include information on the risks of beekeeping and the signs of severe systematic anaphylaxis. Interested people are welcome to attend.

A beekeeper's business meeting will begin at 7:30 p.m. prior to Dr. Lockey's address. The program committee has planned a series of seasonal meetings oriented toward the beginning and prospective beekeepers.

A free will offering will be taken at the meeting.

ORGANIC LIVING

By

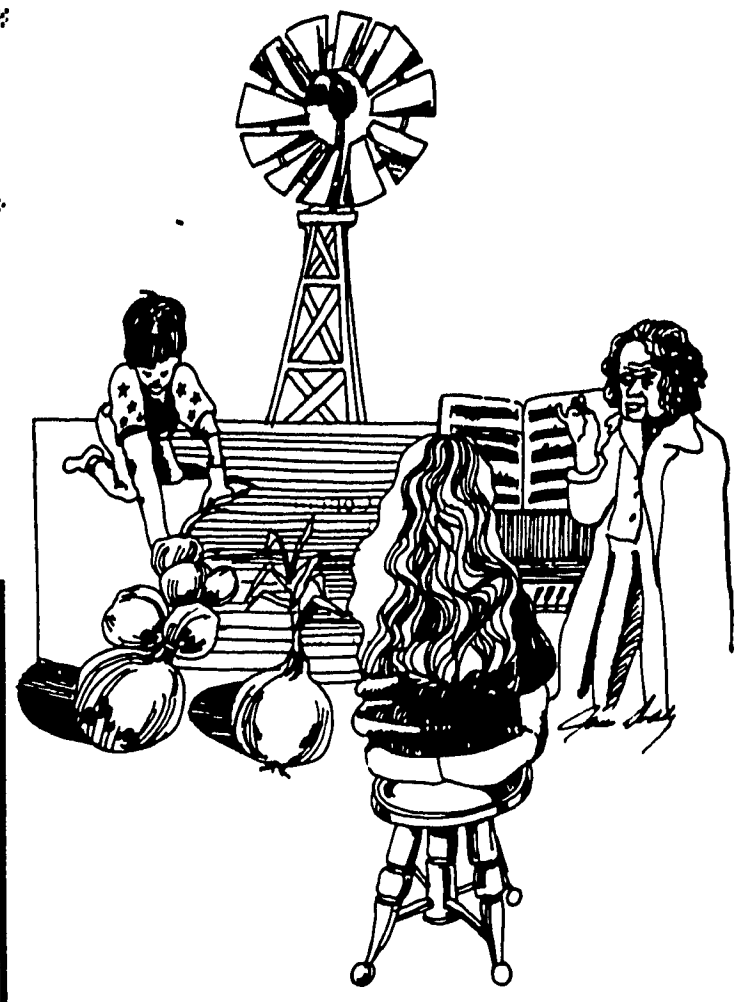
Robert Rodale

Future of Children Will Change

If present birth statistics remain steady, the United States will reach the goal of Zero Population Growth (ZPG) by the year 2000. Births and deaths will balance out for the first time in our country's history. The inexorable expansion of American population will finally end.

Does that make you wonder about the nature of America's destiny after the population - growth watershed is passed? If should, because population growth affects many aspects of life.

Schools and teaching will no longer be growth industries. Baby food makers will see their income decline.



There will be a reduced labor force, meaning that fewer young will have to support a growing number of elderly pensioners. And there will be a smaller number of consumers to buy products and services.

The Commission on Population Growth reported that the economy wouldn't necessarily suffer too much from a shift in age within the population because "neither the health or our economy of individual businesses depends on continued population growth."

But that still doesn't answer questions about the impact of a changing population on the children themselves. What's going to happen to them?

Children born in the year 2000 will find extremely different conditions than exist today.

My prediction is that our present honeymoon with sophisticated technology will have ended by that time. People will again be more self-sufficient, less tied in with a complicated network of life - support systems as is now customary. There will be more personal growing of food, more walking and exercising, and more individual generation of power with windmills and solar collectors.

The old idea of children doing the chores could return. But instead of splitting firewood (trees will be too valuable to burn), there will be other tasks. Exactly what those tasks will be is impossible to predict now, but there will be more pressure for use of children's productivity.

The number of old people will be so great that there will be no way to build enough nursing homes for them - given the shortages of power and building materials that may be chronic by that time. So the old folks will live in closer proximity to children. Possibly there will be a new partnership between the very old and the very young, each being required to take care of each other. That's the pattern now in China, a country thought to be well on the way to controlling its population growth problem.

One of the most important influences on the future life of children will stem from knowledge about environmental exposure now being gained. Diseases like cancer and heart troubles are thought to be caused mainly by environmental insults such as a lifelong diet of foods containing additives, a diet low in fiber, and exposure to occupational hazards in industry.

Although we know now that environment is a major cause of those diseases, the exact dimensions and specific causes of the problem are still being studied. However, by 2000, if not well before, the facts will be in and social and industrial changes will be forced upon us by both regulations and public refusal to bear the burden of ignoring the prevention of disease.

Tomorrow's children will find that some aspects of growing up have been regulated away, thanks to those long-term studies. Exercise will be programmed into our lifestyle. Elevators will be only for the handicapped, for example, and escalators could be as obsolete as dinosaurs. Sugar will be programmed out of the life of the young too, because its role in causing heart disease will be confirmed beyond doubt.

International travel will probably be more limited, but satellite links could bring educational television from around the world into calsssrooms everywhere.

But while we're waiting for those changes we can prepare our children to face a different world - one where survival skills will pay.

We can teach them to garden, to preserve the fruits of their labor, to weave clothing, and to build homes and cities that harmonize with the environment. And we can teach them to be less destructive.

Students of population Paul and Anne Ehrlich note in their new book, "The End of Affluence" (Ballantine), that one primary job is to teach your children that their "adult lifestyle will bear very little resemblance to yours and that they should now be acquiring knowledge, skills, values and tastes that will sustain them in less materially affluent circumstance."

We're going to be living in a very different world in 25 years. The sooner we prepare ourselves and our children for it, the better off we're going to be.

(Editor's Note: The opinions appearing in "Organic Living" are those of its author, Robert Rodale, an independent columnist. Rodale's comments do not necessarily reflect the thinking of the Lancaster Farming editor or anyone else on the Lancaster Farming staff.)

Thomasville 4-H Club

The Thomasville 4-H Community Club met recently at the York 4-H Center. The program was a dental puppet show with an answer and question period following, by Dr. LaMotte, of York.

The American pledge was led by Dan Keeney, 4-H pledge by Jack Parr. The secretary's report was read and approved, the treasurer's report was read and approved with a balance of 1,400.74 reported. The following reports were given to County Council by Tom Welsh: Teen Leader Lock-in-Tim Eisenhart, Promotion-Allen Keeney. During the month of April roadways will be cleaned, April 27 will be observed as Rural Life Sunday by members attending Paradise Lutheran Church. The profit from tickets sold for Automobile Show will be used to buy the club a folding table. A mini exchange with Montgomery County was discussed for this summer. Songs were led by Tammy Barnhart, Bonnie Wire, and Joanne Haskins.

The executive board of the club will meet with Mrs. Harris Horn to discuss the needs of the 4-H Center.

CHESTER COUNTY DHIA MONTHLY REPORT

February 1975

During the month of February, it was a cow in the herd of the Kulp Bros. which recorded the highest butterfat production. Quiet produced 936 pounds of butterfat with 21,526 pounds of milk. Second high was Number 51, in the herd of Walmoore Farm. The animal produced 858 pounds of butterfat with 18,003 pounds of milk.

The herd of Jefferson Yoder had the highest herd average at 2.4 pounds of fat, while the herd of John Stoltzfus placed second high with 2.20 pounds of fat.

Health Dept. To Give Exams For Emergency Medical Aids

The Pennsylvania Department of Health will administer a challenge examination to individuals who have not attended the Basic Training Program for Emergency Medical Technician-Ambulance or equivalent training, but by virtue of other training and experience, consider themselves qualified to perform the duties of an Emergency Medical Technician-Ambulance.

To be eligible to take the examination, applicants must be 16 years of age before June 15, 1975, and be an employee or member of an ambulance or rescue service, be a member of an active duty, National Guard or Reserve Medical Unit, or be assigned to medical duties within any other type of military unit. Individuals who are employed in a hospital emergency department or intensive care unit are also eligible to take the examination. An applicant must be a resident of Pennsylvania.

Any individual who is currently certified by the Pennsylvania Department of Health as an Emergency Medical Technician-Ambulance is not eligible to take the challenge examination.

The challenge examination will consist of a two-hour written examination and a three-hour practical skills examination. Examinations will be administered during the period June 15 through August 15, 1975. Examinations will be conducted on weekends.

Selection of examination sites will be based on the number and location of applicants. Applicants will be advised of date, time and place of examination, by mail.

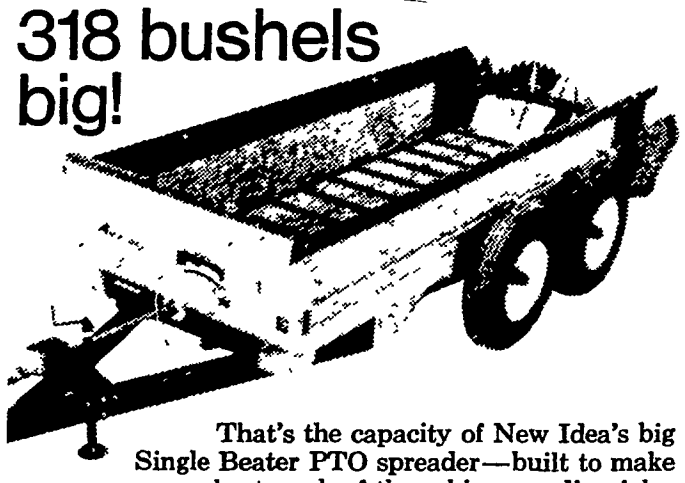
This examination program will not be repeated unless required by future legislation.

Each individual who successfully completes both the written and practical skills examination will be certified by the Pennsylvania Department of Health as an Emergency Medical Technician-Ambulance. Persons who become certified in this manner but have not had American Red Cross First Aid Training are cautioned that they will not be exempt from civil liability under the provisions of the Good Samaritan Act.

Applications for the challenge examination program may be obtained from the Division of Emergency Health Services, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania, 17120. Applications must be received no later than May 15, 1975. Applications received after May 15, 1975 will not be accepted.

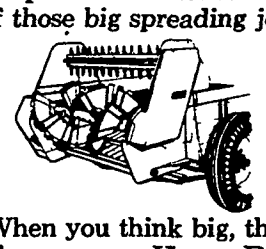
Think Big.

318 bushels big!



That's the capacity of New Idea's big Single Beater PTO spreader—built to make short work of those big spreading jobs.

Optional Upper Beater Breaks up big hunks, shreds the load for better spreading pattern... adds load-carrying capacity, as well.



2-Year Warranty on Chain. When you think big, think conveyor chain. This giant has a super Heavy Duty Chain (20,000 lbs. tensile strength) that's backed by this full 2-year warranty.

Stop in. We're thinking big on trades... right now!

ANOTHER SATISFIED USER OF

STA-RITE Milking Equipment

Deiter Linde, Oxford, R.D.1, has been a Sta-Rite owner for over 3 years He says the Sta-Rite's gentle pulsation has helped keep a leucocyte count under 300,000.

Mr Linde also said — "I like Sta-Rite's visible claw because it lets me see the milk flow from each teat and my milkers are easy to clean"

Deiter Linde had the highest record Guernsey herd in Lancaster County DHIA for the past 2 years.

PSU, Co-op Join for Milk Marketing Meets

Penn State Extension and Inter-State Milk Producers Cooperative held two one day sessions recently in Carlisle and Reading to give county agents a first hand look at milk marketing and the cooperative system.

William Johnstone, ag economist from Penn State acted as the program moderator. Dr. Blair Smith, also an extension ag economist at the university, talked about pricing to both groups of county agents.

The key speaker at both sessions was Dr. James E. Honan, Inter-State's general manager. Honan' told the county agents that policy development plays one of the most crucial roles in cooperatives. "It's a matter of sound decision-making," he said. "This includes setting goals and then getting there."

Honan noted his role as manager is to provide alternative courses of action for the Board, and he said directors should first be trained in operatoinal procedures before making crucial decisions.

Other important potential problem areas among cooperatives outlined by Honan include financing, legislation, education, personnel, sanitation, and mergers and common marketing areas.

Dr. Paul E. Hand, economist, Inter-State, speaking at Reading, updated the extension agents on Order pricing changes resulting from recent Federal hearings. He also answered questions clarifying parity, base and excess pricing, and Order 4 territory expansion.

Among those county agents attending the session in Reading were James Haldeman, Berks Co.; Newton Bain, Lebanon Co.; Glenn Ellenberger, Lehigh Co.; David Dunbar, Lehigh Co.; Charles Forney, Northampton Co.; and Don Fowler, Northampton Co.

Those attending the session at Carlisle include John T. Smith, York Co.; David Norman, York Co.; Harold Lockhoff, Huntingdon Co.; Robert Hedrick, Blair Co.; Roy Snyder, Perry Co.; George Settlemeyer, Juniata Co.; Clair DeLong, Mifflin Co.; John Rosenberger, Juniata Co.; Alan Bair, Lancaster Co.; Eugene Schurman, Franklin Co.; H. P. Kies, Fulton Co.; and John Shearer, Franklin Co.

Also attending were Marion Deppen, assistant director of Extension Service, Penn State, and Steven Snyder, graduate assistant, Agricultural Economics, Penn State.

Costs Down

At times some fresh vegetables and fruits — especially greens, tomatoes, corn and peaches — may cost less than their canned counterparts Berries and melons are often good buys too

Scott Sponsors New Bills For Railroads & Consumers

U. S. Senator Hugh Scott (R-Pa.) joined in sponsoring a bill to create 20,000 public service jobs for the rehabilitation of the Nation's railroads.

Scott said the bill would be aimed at the Nation's unemployed and underemployed persons, and would create jobs paying about $10,000 a year. A formula in the bill also provides for the purchase of steel rails and other materials needed for rehabilitation.

Known as the "Special Public Service Employment and Railroad Improvement Act," the legislation would authorize $300 million to initiate the program this year. The appropriations level for 1976 would be set after further Committee hearings.

The lines of railroads restructured by the United States Railway Association, AMTRAK lines and rail lines designated by the States as "essential" would be covered under the program that would be administered jointly by the U. S. Departments of Transportation and Labor.

"The need for rehabilitation and upgrading of the Nation's rail lines and facilities is beyond dispute," Scott said. "Much of the financial difficulty in which the railroads find themselves–especially in the East and Midwest–can be attributed directly to the problem of deferred maintenance. Further delay on necessary maintenance and repair will only lead to great inefficiencies and even larger funding commitments for the future.

"Not only will this bill help relieve the country's serious unemployment problem, but it will create meaningful jobs that will make a real contribution to the national good," the Senate Republican Leader added.

Anti-Trust Bill

Senate Republican Leader Hugh Scott of Pennsylvania and Senator Philip A. Hart (D-Mich.) joined in sponsoring the "Antitrust Improvements Act of 1975," a comprehensive measure Scott said would be "a positive method to bring down high prices and to control inflationary tendencies in our economy."

Scott has already sponsored in this Congress bills to repeal the fair trade laws and to increase the budgets of the Justice Department and the Federal Trade Commission for more antitrust enforcement. "Antitrust laws have traditionally acted as a check upon the tendency of corporations in some industries not to compete," he said. "Because we don't live in a perfect world, we need antritrust laws now more than ever before. The consumer can only benefit from their just and thorough application."

The Scott-Hart bill introduced "advances a number of ideas that have been discussed for years by those involved in the antitrust field," Scott said. Among them:

To make a plea of nolo contendere in a criminal antritrust action available as evidence in a private antritrust case.

Increase fines, for the first time in 50 years, for failure to comply with a Federal Trade Commission subpoena or special order.

Set forward a method providing that the Attorney General, in certain cases involving large mergers or acquisition, could forestall such mergers pending court determination.

Permit State Attorneys General to file antitrust suits on behalf of citizens of their states (class actions).

Use special masters or other experts to speed resolution of large antitrust cases.

Permit the Antitrust Division of the Justice Department to issue civil investigative demands to individuals as well as companies, including demands in advance of a merger.

Apply antitrust laws to foreign corporations which do business in this country.

Senator Scott said he hoped for quick action on the measure by the Senate.

"I have always been a vigorous supporter of our antitrust laws," he said. "Our system works best when we have full competition. Competition produces a wide variety of products at the lowest possible prices for the consumer and industry."

DHIA Supervisors Train

Floyd I. Zook, Strasburg and Robert Buckwalter, Jr., Christiana, Lancaster County DHIA supervisors, successfully completed a DHIA Supervisors Training Short Course at Penn State March 17-21.

The program is designed to assist those who are currently employed as county DHIA supervisors or for those who are looking for employment as such.

Included in the course was instruction in coding of herds, ear tagging cows, completing reports, forage analysis and interpretation of DHIA costs.

Through their participation in this course the recently employed supervisors will be better able to serve the dairymen of Lancaster County enrolled in the DHIA program.

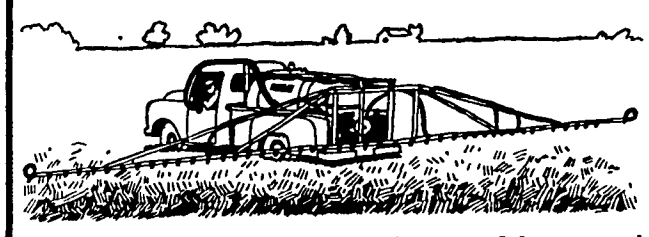
Arcadian Liquid.
Now's the time to top-dress grass.



Unlock the profits hidden in your pastures and meadows. Top-dress grass with Arcadian Golden URAN® liquid nitrogen Properly fertilized, grass can produce yields packed with protein and equal in feeding value to a big corn crop For best results, fertilize several times a year. Start with an Arcadian SLF mixed liquid fertilizer. Then follow with Golden URAN top-dressing after each cutting or grazing. Use SLF mixed fertilizers for top-dressing mixed grass and legumes and alfalfa stubble after a crop has been removed. Add weed killers such as 2,4-D and trace elements if needed, to do more jobs at one time. Arcadian liquid spreads quickly, gives uniform coverage, and is economical to use. We'll spread it for you, or you can do it yourself Start now to make your most neglected crop your most profitable one

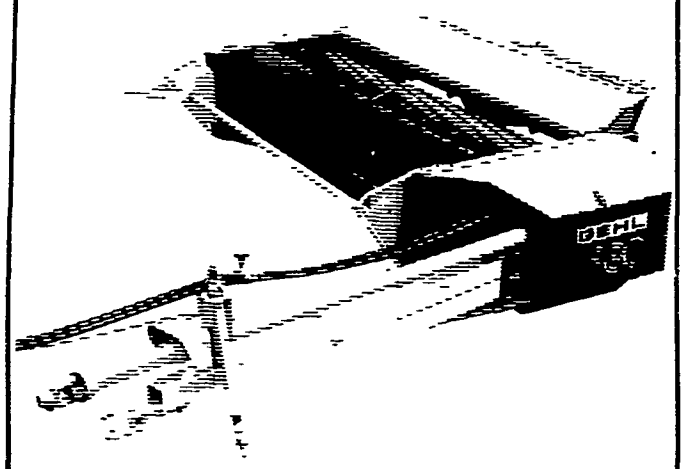
CUTS HAYING TIME



You'll save money, manpower and miles with this Gehl mower-conditioner. It mows, conditions and windrows (or swaths) in a single pass. Handles leafy legumes or coarse forages. You get a high, fluffy windrow that air passes through freely. Single, unitized frame makes the Gehl quiet running, especially on corners. Independent flotation to each end of the machine. Wheels are close to the cutterbar to carry the sickle constant with ground contours. You'll stay ahead of the weather. . .and get your haying done at nutrient saving speed.

Most Farmers Don't Insure Against Hail

Although insurance companies paid a record $184 million for hail damage to growing crops in 1974, industry spokesmen estimate that less than 25 percent of last year's crop-hail losses were insured.

Even in areas where chances of severe hailstorms are high, it is thought that less than half of all farm acreage was protected by insurance last year.

Insured losses in 1974 were up more than 84 percent from the previous year, according to the Crop-Hail Research Bureau in Evanston, Ill., reflecting both an increase in hail damage and a sharp rise in the value of crops insured.

"With the high value of farm commodities and costs generally keeping pace, farmers stand to suffer crippling setbacks in the event of a serious loss," says Walter S. Clevenger, director of agricultural products for The Hartford Insurance Group.

According to the Crop-Hail Insurance Actuarial Association, the upward trend in commodity prices has been responsible for increases of 40 percent or more in each of the past two years in the amount of insurance written. But the number of farmers insuring their crops rose only slightly.

Crop-hail losses tend to fluctuate radically from year to year, state to state, and even township to township, according to Clevenger. It is not uncommon for a severe hailstorm to hammer one farmer's crop into the ground, leaving untouched his neighbor's acreage across the road.

"Unlike hazards which can be brought under control through modern farming techniques, hail is subject only to the whims of nature," Clevenger notes. "When it comes to hail, there is nothing a farmer can do except to take out insurance."

Most crop-hail coverage is taken out annually at the start of the growing season. A farmer may insure his crop for almost any amount he wishes, although in no case will he collect more than full market value of the crop damaged by hail.

Crop-hail insurance has been available in the United States since the late 19th century, but many farmers appear still willing to take their chances against nature.

"If farmers have gone without significant damage experience," explains E. Ray Fosse, manager of the Crop-Hail Actuarial Association, "they downgrade the importance of crop-hail insurance, even though they may be covered for fire on their buildings."

Meat Production Up 2 Percent

Red meat production in Pennsylvania during February 1975 was 2 percent above a year earlier. Slaughter of meat animals was up for cattle, calves and hogs, but down for sheep and lambs, according to the Crop Reporting Service.

Cattle slaughter increased 10 percent, calves 70 percent, and hogs 16 percent, while sheep and lambs were 10 percent below February a year ago.

Nationally, total red meat production was up 8 percent from February a year ago and 6 percent above February 1973. Beef production increased 21 percent from February 1974 and veal was 78 percent higher. Pork production was down 1 percent from a year ago, while lamb and mutton production dropped 7 percent.

Beacon Milking Rations

C.A.F. — The Cow Acceptability Factor — determines how much grain your cows will eat. Beacon Milking Rations are formulated with two goals in mind: the nutrition your cows need to balance their roughage intake and the palatability needed to stimulate them to get that nutrition. Even finicky eaters clean these feeds up well, responding with higher milk production than when fed less palatable feeds.

The Cow Acceptability Factor helps get more grain into your cows in critical periods of milk production. Call us today for Beacon Milking Rations with C.A.F.

Why is this feeder No. 1 with broilermen?

The Chore-Time feeder outsells every other floor feeder on the market for one good reason. It helps broilermen produce more dollars worth of bird from every dollars' worth of feed.

How? By keeping birds supplies with fresh feed at all times. Because birds are not confronted with stale, picked-over feed, their appetites are stimulated. They convert feed more efficiently, gain weight faster and more profitably.

Fact is, Chore-Time is loaded with refinements and exclusive benefits you don't find in other feeders. The pulling feed feature and self-aligning pans are just two that save on feed as well as on operating and maintenance costs

CHORE-TIME

Made to work.
Built to last.

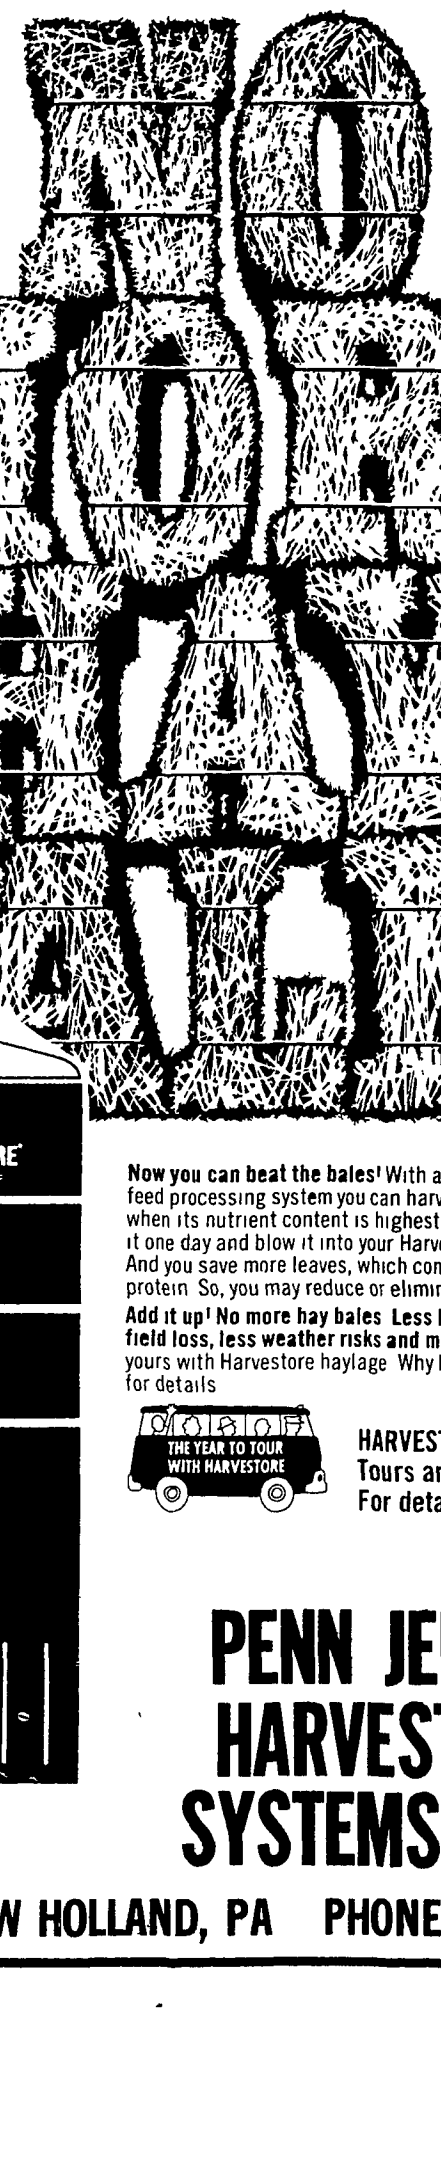
A Harvestore Automated Feeding System Means



Now you can beat the bales! With an automated Harvestore feed processing system you can harvest alfalfa in the bud stage, when its nutrient content is highest You can chop and windrow it one day and blow it into your Harvestore system the next And you save more leaves, which contain some 90% of the protein So, you may reduce or eliminate supplement costs
Add it up! No more hay bales Less labor, less handling, less field loss, less weather risks and more feed value. It's all yours with Harvestore haylage Why bale hay? Ask your dealer for details

HARVESTORE Beef, Dairy and Hog Tours are being planned now! For details, contact us today.

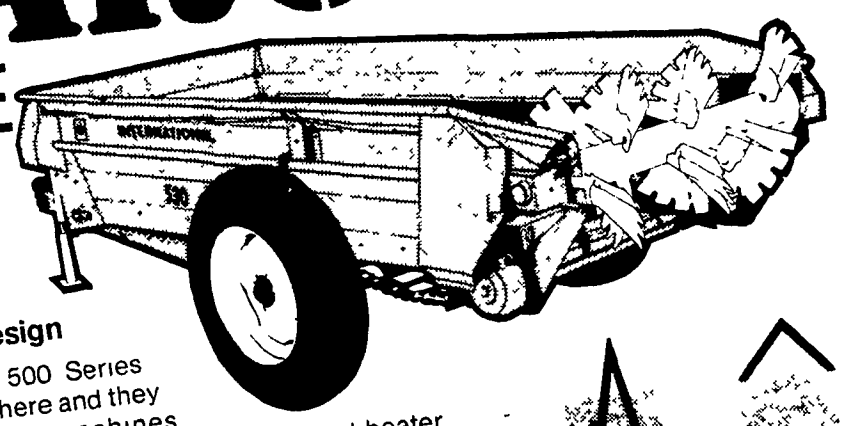
THE BETTER BEARCLAW IS HERE



Stronger frame . . .
improved beater design

The International new 500 Series Manure Spreaders are here and they are years ahead of other machines with a stronger frame and a stronger, more efficient beater design

- Straight-through pull from hitch to wheels eliminates stress on spreader box
- More efficient paddle and beater design eliminates uneven spreader pattern.
- More paddles per foot of width than any other spreader
- Stronger "BearClaw" paddles slice even the toughest, frozen manure
- Strong, beveled worm-gear apron drive adds years to life of apron chains and gears

The 500 Series offers eight models, including two truck mounted models, two big-capacity trailing models with tandem axles, and a model that features hydraulic apron drive for infinite apron speeds

Come in today and get the full story on our "Better BearClaw" manure spreaders from International

Fat Content Reduced in Livestock

U.S. livestock farmers, especially pork producers, have brought about a sharp decline in the fat content of meat and meat products. according to Dr. Lowell L. Wilson of The Pennsylvania State University. Professor of animal science at Penn State, Dr. Wilson spoke to delegates attending the 11th Meat Industry Research Conference held recently at the University of Chicago.

Wilson cited observations by Dr. John H. Ziegler of Penn State in which the backfat thickness of hogs exhibited at Pennsylvania carcass shows had decreased over 38 percent in the past 17 years. Dr. Ziegler is associate professor of meat science at Penn State.

The area of the loin-eye, the muscle contained in the pork chop, has increased about 26 percent. Moreover, the percentage of the hog carcass in the more desirable and high priced cuts, hams and loins, has increased about 30 percent.

Wilson suggested that most of the decreased fat content of hogs has been due to intensive selection of breeding stock for less fat, increased growth rate, and improved rate of gain per pound of feed.

Opportunities exist to reduce further the fat in hogs, he affirmed. However, progress in decreasing fat content may be slower, since livestock breeders and farmers must avoid upsetting other important production traits such as lean meat firmness, reproductive ability, and soundness of feet and legs.

In beef cattle, Dr. Wilson predicted that within the next 10 to 20 years the consumer would demand a beef product much lower in fat content than presently produced. With the wide variety in breeds of beef cattle, he suggested that a carcass with almost any given fat percentage could be produced.

He indicated, however, that several antagonistic factors exist between desirable carcass types and farm production costs determined by traits of beef cattle. Most important of these is the size of the cows which have to be maintained to produce a very lean carcass. Equally important are calving difficulties resulting from the use of very large bulls with extreme amounts of muscling.

Quality beef can be produced from a high-forage, low-grain ration, he stated from research results at many experiment stations. However, cost of production will continue to be greater under these feeding systems than they have been under the moderately high-grain system of the past. This results partly from the high rate of increase of all inputs into any farming enterprise. Then too, cattle have to be fed longer to produce quality carcasses from all-forage rations. And there are other cost factors such as initial establishment of additional high-quality pastures.

"The cattle industry is using about 2.1 pounds of grain to produce one pound of beef, and this trend should continue for many years. We must realize that over 1 billion acres of U.S. land that cannot be used to produce grains are used to grow grass for these cattle. In this way farmers produce the highly nutritious beef available to American consumers," he stated.

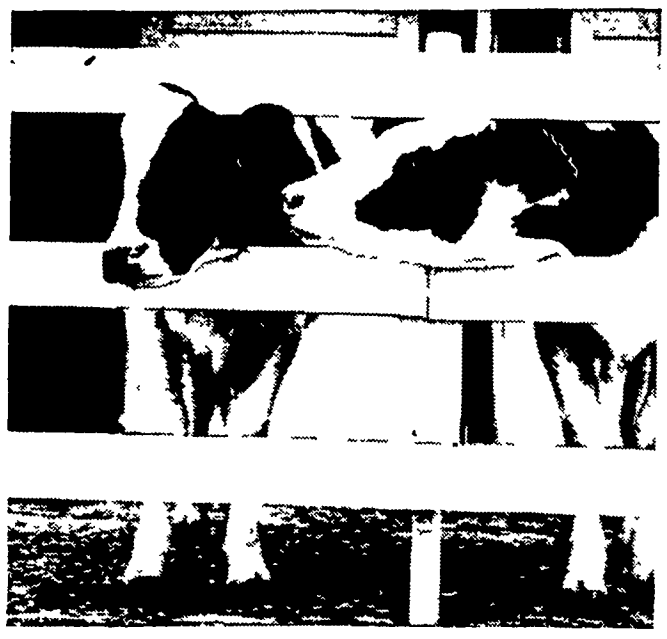
In raising sheep, he claimed that continued improvement can be made by selection within breeds for leaner, meatier carcasses, increased growth rates, and number of lambs weaned per ewe. In addition, there are many different breeds that, if used in crossbreeding programs, can result in continued advances in efficiency.

Also attending from Penn State was Dr. John D. Sink, professor of meat science. Dr. Sink is president of the American Meat Science Association, one of the co-sponsors of the Meat Industry Research Conference. The other sponsor was the American Meat Institute.

The Penn State scientists are associated with the Agricultural Experiment Station at University Park. The year 1975 marks the Centennial for these research divisions of the land-grant universities.

Costs Up

Foods that are most likely to increase your food costs include: cream, ice cream, cream cheese, and specialty cheeeses; ready-prepared dishes; choice cuts of meats, cookies, cakes, pies, ready-made or ready-to-bake buns; snack foods; soft drinks



Sewing Contest

Entries for the Pennsylvania State Grange's annual sewing contest are beginning to roll in, with indications the total may exceed 2,300 by the April 30 deadline, according to Mrs. Leroy Hoover, of Roaring Spring, director of women's activities for the organization.

Last years' contest attracted a record 2,324 entries, Mrs. Hoover said.

Among the early entries are several from young people in the 10-17 age group and in a new class for this year's contest - men's sport coat and pants, or suit.

The age limit for young people has been lowered from 12 to 10 years for the 1975 contest, Mrs. Hoover said. The contest is open to Grange members, and to non-members who are sponsored by a Grange member.

Prizes will be awarded at the local, county or Pomona, and state levels. Winners in the state competition will be judged in the National Grange contest in June. Top prize for the national winner will be a one-week Carribean cruise for two persons.

On an average oatmeal contains 7-8% fat

GROW BIG HEIFERS FAST WITH PURINA CALF GROWENA

Purina Calf Growena® is specially-formulated to help you grow dairy herd replacements fast, breed them early and freshen them between 22 and 24 months. Calf Growena helps you feed heifers at low cost from 3 through 6 months, yet gives them the protein and energy that fast growth demands. Calf Growena is fortified with vitamins and minerals growing calves need.

Purina Calf Growena is part of the Purina calf growing team to help build sound calf growth fast—and at low cost. To grow heifers fast, feed Purina Nursing Chow® or Nurse-Gro to 4 or 5 weeks and Calf Startena® through 2 months. Then, because growing calves still need a high level of protein and energy, feed Calf Growena through six months of age.

Start your heifers growing fast and producing early with Purina Calf Growena. You can buy it in the 50-lb. bag at the store with the Checkerboard sign.

Kennard Dale FFA Holds Annual Banquet

The members of the Kennard-Dale FFA Chapter held their annual Parent-Member banquet Friday, March 21 at 7 p.m. in the school cafeteria, with over 200 members and guests present. Dr. Luther Sowers, Superintendent of South Eastern School District and John Hyson Wilson, local farmer and former Advisory Council Member were honored with the Honorary Chapter Farmer Degree.

Alan Miller, State FFA Chaplain from Red Lion was in attendance and gave the invocation. Chapter President Bob Gross served as Toastmaster.

Terry Murphy, received a $75.00 check and Wildlife Conservation Award from Robert Yeakel, District Game Protector. Terry placed 3rd in the State Wildlife Conservation Contest.

Other award winners announced were:

STATE PROJECT BOOK WINNERS: Ed Hulshart - Gold Medal - Swine Fattening; Bob Gross - Gold Medal - 2 Enterprise Project Book; Terry Murphy - Gold Medal - Wildlife Conservation; Steve Wilson - Silver Medal - 3 Enterprise Project Book; Steve Wilson - Silver Medal - On Farm Work Experience; Larry Robinson - Silver Medal - 7 Enterprises; Ed Alles - Bronze Medal - 2 Enterprises.

OTHER STATE CONTEST WINNERS WERE: - Lenny Hare - 1st Place Team Small Gasoline Engine Contest; Clyde Miller - 1st Place Team Small Gasoline Engine Contest; Clyde Miller - Gold Medal High Individual Small Gasoline Engine Contest; Lenny Hare - Silver Medal 3rd High Individual Small Gasoline Engine Contest; Parliamentary Procedure Team - 2nd Place in State MEMBERS: Bob Gross; Bill Hushon; Gary Hyson; George Knight, III; Steve Harrington; Steve Wilson; Larry Robinson; Jim Sizemore; State Chorus Award - Kenny Williams.

The nine members of the Chapter who were awarded their Keystone Farmer Degrees at the Farm Show received their gold Keystone Farmer Charms: Ernie Conley, Bob Ebaugh, Bob Gross, Russ Gross, Lenny Hare, Bill Hushon, Gary Hyson, Larry Robinson, Steve Wilson.

CHAPTER FOUNDATION AWARDS WERE PRESENTED TO THE FOLLOWING: Duane McLaughlin - Placement in Agribusiness; Lenny Hare - Agriculture Mechanics; Larry Robinson - Dairy Farming; Ed Ailes - Swine Production; Albert Robinson - Beef Production; Bob Gross - Crop Farming; Ed Hulshart - Livestock Farming; Jim Sizemore - Public Speaking; Steve Wilson - Placement in Ag. Production; Terry Murphy - Wildlife Management; Ernie Conley - Placement in Ag. Products; Steve Strickler - Placement in Sales and Services.

The Scholarship Award Winners Were: 9th grade - Tom Heaton and Dean Miller, 10th grade - Terry Murphy, 11th grade - Ron Grove, 12th grade - Jerry - Grove.

The top winners named were: Paul Knight - Star Green Hand; Jim Sizemore - Starr White Rose Farmer; Larry Robinson - Chapter Star Farmer; Steve Wilson - Chapter Star Agribusinessman; Bob Ebaugh - Dekalb Award.

Receiving awards at the Kennard Dale FFA Banquet held recently in York County were: (from left) Steven Wilson, Chapter Star Agribusinessman; Larry Robinson, Chapter Star Farmer; Jim Sizemore, Chapter Star White Rose Farmer and Paul Knight, Star Greenhand.

Antique Show Slated

Mr. and Mrs. Dennis F. Cox, 1015 Kreps Road, have been named co-chairmen of the Lancaster Heritage Antique Show, which is slated for May 8, 9 and 10 at the Farm and Home Center, Arcadia Road.

The show, in its fourth year, has become one of the most outstanding antique expositions of its kind. It is sponsored by the Farm and Home Foundation in cooperation with the Lancaster Historical Society.

This year's show will feature a series of lectures, demonstrations and exhibits for antique collectors, as well as the show and sale of antiques by some of the finest antiquarians in the Eastern part of the United States.

Mrs. Cox is a Lancaster County antique dealer. She operates a shop in their home, a pre-Revolutionary house built by a nephew of Hans Herr, at 1015 Kreps Road in Manor Township.

The former Gay L. Blevins, she is a native of Willow Street and a graduate of Penn Manor High School. She is also a graduate of Millersville State College, where she received a degree in art, and attended C.W. Post College in New York. She was formerly an art instructor in the Lancaster City School System.

Mr. Cox is director of public relations for National Central Bank.

He is also a graduate of Penn Manor High School and holds degrees in journalism and political science from Penn State University.

Active in civic and community affairs, he is vice chairman for communications for the Lancaster County Republican Committee, a member of the board of directors of the United Way of Lancaster County and an advisory member of the board of directors of the Farm and Home Foundation.

Tobacco Crop Exported

With U.S. tobacco exports setting an all-time record of $1.2 billion in 1974, Maryland's unique Type-32 leaf, a light air-cured species, accounted for $13,717,000 for that foreign trade figure.

The Maryland Department of Agriculture, quoting USDA sources, reports that last year Maryland tobacco exports registered a 13.4 percent increase over the previous year, to reach a total of 10.9 million pounds, as compared with 9.5 million pounds for 1973.

A comparison of the three largest overseas markets shows that Switzerland and Belgium - Luxembourg increased purchases by 9 and 44 percent respectively, while shipments to West Germany were down by 14 percent.

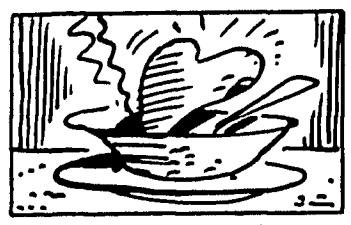
The top quality Maryland tobacco, representing about 40 percent of the total crop, is sold abroad, with Switzerland traditionally purchasing about half of the state's exports.

No shipments were made to Canada or the Latin American countries last year, though in the past those countries have purchased some quantities. In 1974, Spain, Portugal and Australia were among the importers of the Maryland leaf.

Maryland tobacco is prized for its superior quality, flavor and clean burning characteristics. Domestically, only a small portion of Type-32 is mixed with other cigarette tobaccos. In Switzerland, a much higher percentage of the Maryland plant is incorporated in the blends used by cigarette manufacturers there.

Maryland farmers in St. Mary's, Charles, Prince Georges, Calvert and Anne Arundel Counties produced 28,800,000 pounds of tobacco last year. Though that crop will not be sold until late spring, the yield has an estimated value of over $26 million, according to the Maryland Crop Reporting Service.

Once the state's most valuable field crop, tobacco now ranks third in dollar value, behind corn and soybeans. The 1974 crop will be sold at the loose-leaf auctions held at Wayson's Corner, Upper Marlboro, Waldorf and Hughesville, beginning in the middle of April.



Some people believe that eating a jackal's heart will cause a child to grow up a coward.

County Fairs Receive Funds

Almost half of Pennsylvania's state and county fairs will receive more than $½ million for capital improvements this year, it was announced today by Pennsylvania Agriculture Secretary Jim McHale.

The Secretary said that at a recent Matching Funds Committee meeting of the Pennsylvania Fair Fund, a total of $540,604 was approved for 49 fairs in 40 counties on a matching basis for capital improvements, the largest sum ever awarded. The previous year, $110,000 was distributed for capital improvements at fairs.

McHale also disclosed that more than $1.8 million went to state and county fairs and statewide agricultural organizations from horse racing proceeds in 1974. This money is used primarily to reimburse fairs and organizations for the premiums they have paid in competitions.

The breakdown of the total disbursement of $1,817,608 is: $1,488,560—to 105 fairs; $174,142 to 67 4-H funds; $101,309 to 52 Future Farmers of America groups; and $53,595 to nine statewide organizations that hold agricultural competitions.

The total disbursement in 1973 was $1,784,434.

Sheep Field Day Slated

The 1975 Pennsylvania Sheep Field Day will be held on May 24, 1975 at the Harford Fair Grounds, Harford, Pa. in Susquehanna County. The Field Day Chairman, Frank Supancik of Uniondale, reports that the northeastern Pennsylvania Sheep and Wool Growers Associations will host the event and have planned an outstanding field day.

The program will include a talk on the Pennsylvania Meat Animal Evaluation Center, by Robert Kimble, Director, Pennsylvania State University; USDA Wool Incentive Program by Ben Morgan, Extension Livestock Specialist, Pennsylvania State University; and Lamb Marketing by Mr. Miller of Miller Abattoir, North Bergen, N. J.

The Field Day will start promptly at 10:00 a.m. with the Sheep Judging Contest for 4-H Teams and classes for Junior and Senior individuals. Other activities will include a sheep dog demonstration, boning a lamb carcass, wool show, spinning and dyeing display and demonstrations and exhibits of sheep supplies. The State 4-H Shearing contest will start at 9:00 a.m. and continue during the morning.

A lamb dinner will be served at noon. Camping privileges are available on the fair grounds for persons with camp trailers who wish to stay overnight on May 23 and 24.

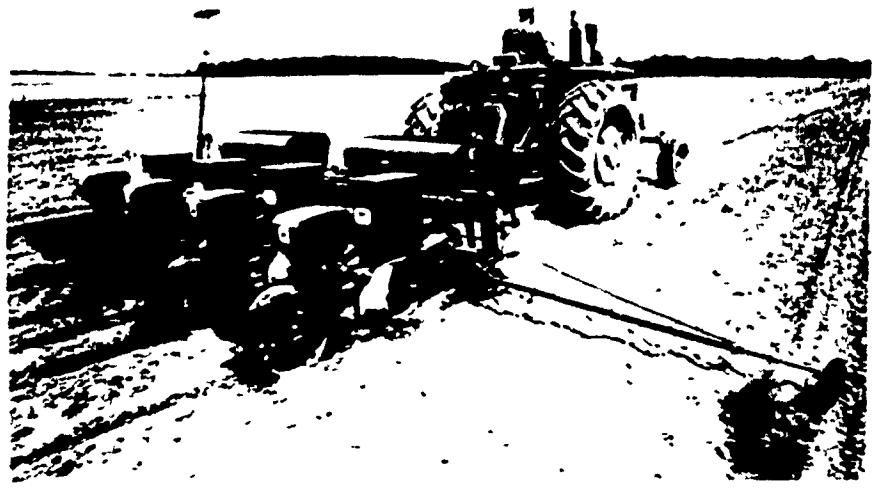
AGWAY



HOW TO MAKE THE MOST OF YOUR FERTILIZER DOLLAR

As you prepare for spring; here are three suggestions aimed at helping you stretch your fertilizer dollar without sacrificing yield or acres. And you may be sure that Agway is working hard to back up these ideas with the plant foods needed by you and your neighbors.

1. Use Agway Corn Starter

It takes just 200 pounds of Agway Corn Starter, through the planter, to help get that planting off to a strong, early start. It is fortified with a fast-working source of starter nitrogen, with over 60 percent of the phosphorus in water soluble form and with key micronutrients so critical to early growth. Agway Corn Starter goes to work even under cold, wet planting conditions.

2. Assure accurate row application

For vegetables and tobacco, even application of plant food is a must. An Agway complete ammoniated-granulated fertilizer is the ideal way to make sure the job is done right. Today, Agway is the largest supplier of these fertilizers in the Northeast.

3. Save time with Agway Nitan

A custom-applied application of Agway Nitan solution may be the best way to make certain your corn gets the nitrogen it needs to build top yields this year. We are scheduling the application rigs right now on a first-call, first-served basis. It can be a time and labor-saver for you.

We're ready to work with you to help make sure that your particular requirements are met.

Call now so we will know what you need and when you will need it.
